
Product Information

Overview

The USB-C VGA Multiport Adapter lets you connect your USB-C or Thunderbolt 3 (USB-C) enabled Mac and iPad Pro to a VGA display, while also connecting a standard USB device and a USB-C charging cable.

The USB-C VGA Multiport Adapter allows you to mirror your Mac or iPad Pro display to your VGA-enabled TV or display in up to 1080p HD. It also outputs video content like movies and captured video. Simply connect the adapter to a USB-C or Thunderbolt 3 (USB-C) port on your Mac or iPad and then to your TV or projector via a VGA cable (sold separately).

Use the standard USB port to connect devices such as your flash drive or camera or a USB cable for syncing and charging your iPhone, iPad, or iPod. You can also connect a charging cable to the USB-C port to charge your Mac or iPad Pro.

What's in the Box

Apple USB-C VGA Multiport Adapter

Tech Specs

Connections

USB-C

System Requirements

Requires a VGA cable (sold separately) for connection to your TV or projector.
