

# Product Carbon Footprint

## T27QD-4v

**Lenovo**

Machine Types: 64B8

Device Type: Monitor

Report Date 07/14/2025

Lenovo values our commitment to the environment. As part of that commitment, Lenovo performs a streamlined product lifecycle analysis in accordance with the IEC TR 62921 standard. This analysis allows the customer to estimate the carbon footprint of their product. The carbon footprint is the total green-house gases emitted by the product over its lifespan reported as global warming potential for 100-year time horizon (GWP-100) in units of CO<sub>2</sub> equivalents

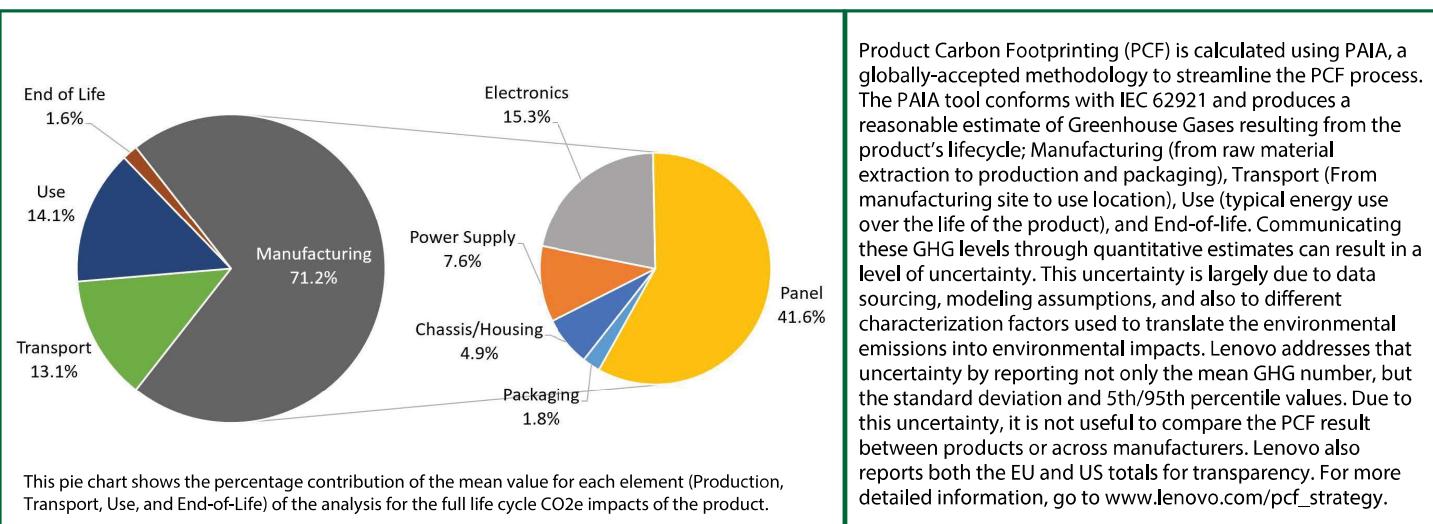

Estimated carbon footprint of the: **T27QD-4v**

**429 kg CO<sub>2</sub>e ± 100 kg CO<sub>2</sub>e**

This estimate uses the assumptions from the table below (Based on EU use location. U.S. estimates below):

|                          |      |                                 |       |                   |        |
|--------------------------|------|---------------------------------|-------|-------------------|--------|
| Product Weight (kg)      | 7.17 | Product Screen Size (inches)    | 27.0  | Assembly Location | China  |
| Product Lifetime (years) | 4    | Yearly Typical Energy Use (kWh) | 67.07 | Use Location      | Europe |

Below is a breakout of the carbon emissions of this product by both lifecycle stage (raw material extraction through product end-of-life) and greenhouse gases resulting from the manufacture of major components:

|                          |     |                       |      |                          |     |
|--------------------------|-----|-----------------------|------|--------------------------|-----|
| Mean (EU):               | 429 | 5th Percentile (EU):  | 239  | Mean (US):               | 498 |
| Standard Deviation (EU): | 100 | 95th Percentile (EU): | 1001 | Standard Deviation (US): | 78  |
