

Asset Management with TeamViewer Remote

Gain visibility into your IT by tracking your assets

What software is installed where? How much memory is in use? What's the IP address of the device that requires remote support? Gain a deeper insight into your IT systems in real time and without the input of the end user. View your deployed hardware and software and deploy new software packages quickly and easily.

Inventory tracking

From the installed memory (RAM) to an overview of specific software versions, never lose track of your IT inventory with TeamViewer Remote.

Hardware

Capture your operational hardware in a comprehensive inventory report in seconds.

- ✓ Type
- ✓ Name
- ✓ Details
- ✓ Manufacturer

Software

Check whether or not inappropriate software has been installed in your infrastructure, or if your licenses fully account for actual software use.

- ✓ Version
- ✓ Change date

Inventory reporting

With TeamViewer Remote, you can generate comprehensive reports about your hardware and software. In seconds, you will have a complete inventory report, or a report you created focused on specific content.

You can also export the information to a CSV file for use in other applications.

Important device information

Know more about your devices right away. TeamViewer Remote provides you with an overview of important device information up front.

With just one click, you will be presented with the operating system, installed hardware, respective network domain, and internal and external IP address.

Software deployment

Streamline your software deployment process with TeamViewer Remote.

TeamViewer Remote enables you to install new software on remote devices without the need to connect to each machine separately.

Roll out new software effortlessly, achieve consistency by providing the right software to the right devices, and track your running and completed software deployments in the deployment history.

Remote Support with TeamViewer

Increase your productivity, prevent downtime, and avoid unnecessary travel by solving IT problems remotely.

- ✓ Manage and support both attended and unattended devices from anywhere.
- ✓ Detect and patch vulnerabilities due to outdated software.
- ✓ Gather real-time device information such as IP addresses, operating systems, and more.
- ✓ Monitor devices and receive alerts when your attention is required.
- ✓ And much more!
