

SAMSUNG

Professional monitor range line up

Unlock your business potential
in the new world of work.

Samsung professional monitors

Unlock your business potential in the new world of work.

Experience

From the design of the bezels to intuitive tools, our monitors offer enhanced user experience.

- ✓ **Flat & curved displays** (up to 1000R curvature)
- ✓ **Connectivity** (USB-C/Thunderbolt™, LAN, DP, etc.)
- ✓ **Wide color gamut** (up to 98% DCI-P3)
- ✓ **Color support** (up to 1.07 billion colors)
- ✓ **Multitasking tools** (Picture-by-Picture, Picture-in-Picture)

Well-being

Our products maximise viewing comfort, while protecting against eye strain.

- ✓ **Adaptive picture** (adjust brightness & color)
- ✓ **Eye Saver Mode** (reduces blue light emissions)
- ✓ **Flicker Free** (no flickering screens)
- ✓ **Ergonomic stand** (HAS, tilt, swivel, pivot, VESA)

Sustainability

We work to push technology forward with more environmentally conscious innovations.

- ✓ **Eco Saving Plus*** (use up to 10% less energy)
- ✓ **Our packaging**** (reduced plastics and oil-based ink)
- ✓ **Industry certifications** (TCO Certified, EPEAT)

*For detailed testing information, please see page 53. **Samsung's commitment to phasing out plastic packaging includes monitor display boxes for S80UA and S60UA models only. We have reduced plastic and shrink wrap in the distribution stage and the boxes are designed with minimal text and graphic imagery to reduce oil-based ink use.

ViewFinity

The power to perfect professionals

Productive, precise, powerful. Samsung's high resolution ViewFinity monitors deliver innovative experiences that can unlock the potential of business professionals, content creators, and even graphic designers, with technology that brings any vision to life like never seen before.

High resolution

More pixels show more detail, and the wider workspace allows you to view more content with less scrolling and zooming.

1 Billion Colors

Pro-level color expression

With up to 64x more colors, wider color gamut, and more refined shades than conventional monitors to enable the ultimate color precision and accuracy.

Superior connectivity

Through multiple ports (monitor becomes a docking station through single Thunderbolt™, USB type-C and LAN) & TUV Intelligent Eye Care in most models.

Mainstream monitors Excellence... everyday

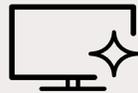

Perfect color down to the last detail. A range of monitors with IPS panels to preserve vividness and clarity across every inch of the screen. Work comfortably on the productivity-boosting wide display.

The virtually borderless screen shows you the full picture and looks almost gapless when used in a dual-monitor setup. See more at once, with less distractions in your way, and get through larger sections of your to-do.

IPS panel

Preserves color vividness and clarity of multimedia contents across every inch of the screen through 178° of wide viewing angle.

Flicker Free

Specially designed to produce a single continuous light source, protecting eyes from the constant strain of screen flickering on conventional monitors.

Eye Saver Mode

Reduces blue light emissions which might be harmful to retinas. It's beneficial in preventing eye strain, especially during extended use.

Bright ideas in every monitor

The **brightness** of a monitor determines more than just how much light the screen emits. It also influences the color representation and the impact of ambient light on your monitor.

The standard **typical brightness** for desktop monitors 250-350 nit or cd/m^2 .

A **nit** is used in measuring luminance or the brightness in screens of laptops, televisions, tablets, and other devices with displays. Nit is also known as candela per square meter.

Smoother viewing experience

The rapid 75 Hz screen refresh rate minimizes image lag and motion blur for smoother user experience.

Refresh rate* is the number of times in a second that a monitor refreshes its image. Since movement is displayed by the difference between frames, the refresh rate effectively places a hard cap on the frame rate visible.

Refresh rate is an attribute of the monitor, while frame rate is an attribute of the information being sent to it.

High Dynamic Range

With HDR, dark areas are richer and more profound, while bright parts are even more dazzling and intense, delivering clear and detailed resolution.

HDR - technology that enables achieving higher tonal range
HDR10 – media profile standard based on 10 bits depth
DisplayHDR400 – same as HDR10, 400 is the peak brightness in nits
DisplayHDR600 – same as HDR10, 600 is the peak brightness in nits

Extend the connectivity of your PC

There are a few different ways that you can use the USB ports on your monitor, while connected to your PC:

- As a USB hub
- Powering devices such as notebooks or mobile devices*
- To carry streaming data from the CPU
- Daisy chaining multiple monitors**
- To play external media

There are several types of USB ports:

- USB port Down type A (rectangular) is normally used to connect peripherals (e.g. keyboard, mouse, storage devices) to the monitor.
- USB port UP type B (square) or USB port UP Type-C is needed to connect the monitor to one of the USB ports of the PC to allow the monitor to become a USB ports HUB, enabling other USB ports from the monitor to extend to those on your PC.
- USB port Down type-C can charge mobile phones and/or are used to connect peripherals (e.g. keyboard, mouse) to the monitor.

Neither of these USB ports are used to play files directly on the monitor, unless the monitor has Smart TV functions.

Boost productivity with Samsung DeX

Samsung DeX is a Samsung developed “desktop” environment when connecting your Samsung phone/tablet to a monitor. Connect a keyboard and a mouse wirelessly and you’ll have a full work environment powered by a Samsung mobile phone and/or tablet.

*Wired connection is available via HDMI compatible display. Some functions of Samsung DeX with HDMI adapter or cable may differ from those with DeXStation and DeXPad. **DeX enabled devices: Z Fold4 , S22, S22+ S22 Ultra, S21 FE 5G, S20 FE 5G, TabS8, TabS8 Plus, Tab S8 Ultra, XCover6 Pro, Tab Active 4 Pro and Tab Active3

Enhanced concentration and comfort

Enhance productivity and reduce eye strain for those long working days. Samsung curved closely monitors matches that of the human field of sight, allowing content to be viewed at a glance while proven to effectively limit eye strain compared with flat monitors for a more comfortable experience. The main difference between 1000R and 1800R curved monitors is that the 1000R offers a more accentuated display curvature, while 1800R monitors provide a milder curve.

Eye Comfort Validation by TUV Rheinland

Samsung Curved Monitor was validated by TUV Rheinland, the worldwide recognized certification institute in Germany. TUV Rheinland tested the performance of Samsung Curved Monitors on reducing picture distortion and increasing eye comfort. **80%** of participants in the eye comfort test has chosen comfortable for curved monitor.

Realize richer, more refined shades with DCI-P3 & sRGB

The color gamut describes the range of colors supported by a device. Depending on how wide gamut is, the monitor will display different quantities of color.

DCI-P3 provides 26% wider color gamut than sRGB, which enables the ultimate color precision and accuracy for media professionals by coupling DCI-P3 with a 4K monitor. Especially with DCI-P3 98% you can experience exact same color with those from phones.

▶ Comparison of color space btw DCI-P3 & sRGB

* DCI-P3 98% is supported in 'custom' mode.

Easy on the eyes

Studies show that blue light from the sunlight, computer monitors, and fluorescent lamps may be harmful to the eyes, causing macular degeneration. These concerns are serious, and Samsung developed Eye Saver Mode which features blue light reduction technology.

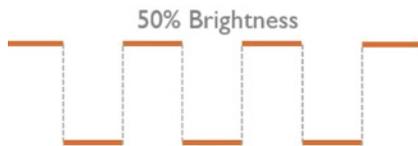

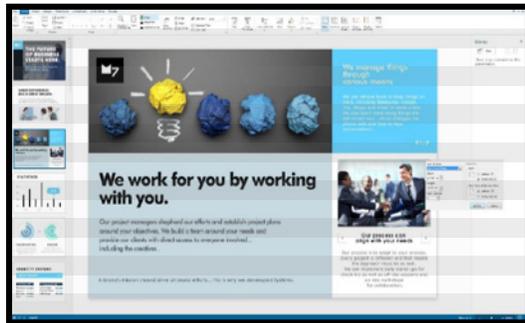

Eye Saver Mode smartly reduces blue light emissions which may be harmful to retinas. It's beneficial in preventing eye strain, especially during extended use.

Easy on the eyes

Protects eyes from the constant strain of screen flickering on conventional monitors

Flicker Free monitors are specially designed to produce a single continuous light source. A typical monitor adjusts its brightness through flickering, introducing periods of low light between higher brightness. While a user may not be aware of the flicker, it can cause a number of issues, including eye strain. However, many monitors now use flicker-free technology to put less strain on monitor users' eyes.

TCO Certified is a world-leading sustainability certification for IT products. It includes a comprehensive system of up-to-date criteria, independent verification and a structured system for continuous improvement to drive real and lasting change.

www.tcocertified.com

In order to achieve TCO Certified status, Samsung monitors must meet the following criteria:

1. Environmental and social criteria with direct impact

Criteria in TCO Certified go beyond legislation and industry standards to challenge the IT industry and drive progress. A new generation of updated criteria is developed every third year, to drive incremental change and push sustainability where it matters most. Criteria areas include hazardous substances, circularity, socially responsible manufacturing, environmentally responsible manufacturing, and much more. All criteria are mandatory which means that all certified products must meet all criteria for its product category in TCO Certified.

2. 20,000 hours of independent verification each year

With TCO Certified, compliance with all criteria is independently verified by accredited experts. Independent verification organizations spend more than 20,000 hours on product testing and supply chain assessments each year. Verification is mandatory and continuous — it is carried out both before and after certification, throughout the certificate's validity period.

TÜV Rheinland is a leading provider of technical services worldwide. The group provides a broad range of testing, inspection and certification services to ensure the safety, reliability and regulatory compliance of assets and components throughout their lifecycle. For over 145 years, TÜV Rheinland have been developing solutions to ensure the safety and quality of the interaction between man, technology, and the environment.

www.tuv.com

Issued by The Global Electronics Council, the EPEAT ecolabel is the leading global Type 1 ecolabel covering products and services from the technology sector. It ensures the veracity of EPEAT-registered products through an ongoing surveillance process known as Continuous Monitoring. Continuous Monitoring activities occur throughout the year and test the ability of Participating Manufacturers to prove conformance with EPEAT criteria on an ongoing basis.

www.epeat.net

UL certifications demonstrate that Samsung products have been tested to applicable standards. UL's recognized regulatory expertise provides critical credibility to authorities and the marketplace. Bring products to market more efficiently and clearly differentiate them on crowded shelves with certification from the safety science leader.
