Backup and Recovery for Power Platform

Easily protect your data-driven business solutions — starting with Power BI protection.

Microsoft doesn't provide native backup options for key data in Power BI. Protect your data-driven decision making and business against data loss and downtime with Keepit's secure, simple, and fast data protection for Power BI.

Why backup Power BI?

Secure your Power BI data
with Keepit's immutable cloud to avoid data loss and downtime

Recover data in minutes
to improve IT and data scientist efficiency

Stay compliant
with internal and external business continuity, cybersecurity, and compliance controls.

No Native Backup in Power BI
Microsoft offers no native backup options for reports, workspaces or datasets in Power BI. Avoid losing data from accidental deletions or alterations, malicious deletion, file corruption, or loss of items or data that are required for compliance reasons.

Comprehensive Coverage of Power BI Shared Workspaces
Keepit gives you extensive coverage when backing up your Microsoft Power BI data. Across the Service, Web app and Desktop app, the backup solution for Power BI Shared Workspaces covers:

Underlying data*
*limitations

Datasets*

Dataflows

Reports*

Coming Soon: Power Automate and Power Apps coverage
We're soon expanding our protection to include more of the Power Platform workloads.

Get Your Power BI Data Back in a Snap

Specifically designed for admins, Keepit makes manual restore processes a thing of the past. With ultra-fast smart search and restore features, you can restore multiple terabytes a day and get your Power BI data back into its original location, along with original metadata and relationships.

Our Restore Capabilities Include:

In-place restore
Get data back to where it originally resided

Download
Download individual data objects or complete folders

Shareable Links
Provide users with a secure link to their data

Why Companies Globally Trust Us

Customers around the world have made Keepit their preferred choice to protect their data against data loss and downtime. Here's why they trust Keepit to keep their data safe:

Business Continuity

Preserve access to essential data and continue business operations with clean copies of your data

Instant Recovery

Find what you need quickly and restore individual records or entire application datasets in a few clicks
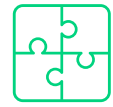

Leading Security

Prevent attackers from manipulating your backups and minimize the risk of data breach with reliable security

Cost Effectiveness

Never worry about overage costs or hidden surprises with simple and transparent pricing that saves you money

Outstanding Simplicity

Minimize deployment efforts and significantly reduce admin time with a simple platform made to improve efficiencies

Keepit is the world's only independent cloud dedicated to SaaS data protection

You only need Keepit to cover all your key SaaS applications, including Microsoft 365, Salesforce, Azure Active Directory, Dynamics 365, Google Workspace, and Zendesk. Keepit is trusted by thousands of companies worldwide to protect and manage their cloud data. Leading analysts agree that Keepit is the fastest and most secure enterprise-class SaaS back-up and recovery service.
