HPE Flexible Slot (Flex Slot) Power Supplies share a common electrical and physical design that allows for hot plug, tool-less installation into HPE ProLiant Gen11 Performance Servers. Flex Slot power supplies are certified for high-efficiency operation and offer multiple power output options, allowing users to "right-size" a power supply for specific server configurations. This flexibility helps to reduce power waste, lower overall energy costs, and avoid "trapped" power capacity in the data center.

All pre-configured servers ship with a standard 6-foot IEC C-13/C-14 jumper cord (A0K02A). This jumper cord is also included with each standard AC power supply option kit. If a different power cord is required, please check the [ProLiant Power Cables](#) web page.

- European Union Erp Lot 9 Regulation  
European Union (EU) eco-design regulations for server and storage products, known as Lot 9, establishes power thresholds for idle state, as well as efficiency and performance in active state which vary among configurations. HPE ProLiant Gen11 servers are compliant with Lot9 requirements.  
Please visit: <https://www.hpe.com/us/en/about/environment/msds-specs-more.html> for more information regarding HPE Lot 9 conformance.

Beginning on January 1<sup>st</sup>, 2024, units sold into the European Union (EU), European Economic Area (EEA), the United Kingdom, or Switzerland must include more efficient AC power supplies: 94% for multi-output and 96% for single-output. HPE Flexible Slot power supplies are single-output, and part numbers 865438-B21, P03178-B21, and P44712-B21 are 96% efficient, thus meeting requirements.

HPE is on target to fulfil compliant systems ahead of time and will begin enforcing these requirements in advance to satisfy requests with the current power supplies by the set deadline.

## HPE Server UEFI

Unified Extensible Firmware Interface (UEFI) is an industry standard that provides better manageability and more secured configuration than the legacy ROM while interacting with your server at boot time. HPE ProLiant Gen11 servers have a UEFI Class 2 implementation to support UEFI Mode.

**Notes:** The UEFI System Utilities tool is analogous to the HPE ROM-Based Setup Utility (RBSU) of legacy BIOS. For more information, please visit <http://www.hpe.com/servers/uefi>.

## UEFI enables numerous new capabilities specific to HPE ProLiant servers such as

- Secure Boot and Secure Start enable enhanced security.
- Embedded UEFI Shell
- Operating system specific functionality
- Mass Configuration Deployment Tool using iLO RESTful API that is Redfish API Conformant
- Support for > 2.2 TB (using GPT) boot drives.
- PXE boot support for IPv6 networks
- USB 3.2 Gen1 Stack
- Workload Profiles for simple performance optimization

## UEFI Boot Mode only

- TPM 2.0 Support
- iSCSI Software Initiator Support.
- NVMe Boot Support
- HTTP/HTTPs Boot support as a PXE alternative.
- Platform Trust Technology (PTT) can be enabled.
- Boot support for option cards that only support a UEFI option ROM.

**Notes:** For UEFI Boot Mode, boot environment and OS image installations should be configured properly to support UEFI. Enabling TPM 2.0 no longer requires TPM module option kit for Gen11. It is an embedded feature yet disabled for shipments to China.

## Configuration Information

### Smart Templates from HPE

HPE is releasing new Smart Template technology in the One Config Advanced (OCA) configurator. These Templates represent the CTO equivalents of the top-selling BTO configurations. They are intended to provide simple starting points to assist you in easily creating and customizing your desired Server solutions. HPE Servers that have Platform Templates, developed by HPE Product Managers, will have a separate tab in the HPE OCA configurator.

### Workload Solutions Templates from HPE

The Workload Solutions Templates build on the Smart Templates technology to easily develop working configurations of the most compelling Workload Solutions. The templates complement the Reference Builds developed by HPE. Workload Solutions templates preconfigure some of the key architecture decisions and make it easier for Sellers to get started and complete a differentiated server solution for your customer's specific workload.

### Mainstream SKUs

HPE launched the Mainstream SKU initiative as a market-driven approach to Demand Steering. It is a simplified portfolio of our top selling options that meet the current and future market trends. HPE has committed to provide a more predictable and faster experience for these options. Mainstream SKUs enjoy higher safety stock levels and have higher fulfillment service levels than non-Mainstream SKUs. Mainstream orders are fulfilled +30% faster than non-Mainstream orders, have fewer shortages and better recovery dates. This platform has Mainstream SKUs in the options portfolio, and is eligible for the improved Mainstream experience. Mainstream SKUs are designated with a Mainstream symbol in our configurators.

### Mainstream Configurations

HPE is using the new Smart Templates technology to present Mainstream configurations. All the options in a Mainstream configuration are pre-selected Mainstream SKUs to optimize the performance, predictability and fulfillment experience. Check the Template section in our configurators for eligible Mainstream configurations.

This section lists some of the steps required to configure a Factory Integrated Model.

To ensure valid configurations are ordered, Hewlett Packard Enterprise recommends the use of an HPE approved configurator. Contact your local sales representative for information on configurable product offerings and requirements.

- Factory Integrated Models must start with a CTO Server.
- FIO indicates that this option is only available as a factory installable option.
- Some options may not be integrated at the factory. Contact your local sales representative for additional information

### Notes:

- All DL360 Gen11 CTO Server models require the selection of Processor, Memory and Power Supply. Backplane to be further selected in 8SFF CTO Server.
- HPE Trusted Supply Chain (P36394-B21) is an optional security upgrade intended for agencies and regulated industries needing enhanced security and compliance needs. Applying this option to a DL360 Gen11 CTO server ensures it is built in the USA in a secured facility by vetted HPE personnel assigned to the manufacturing processes. A multitude of checkpoints/inspections for malicious microcode and counterfeit parts are performed throughout the server build, and additional safeguards are put in place against cyber-exploits throughout the server lifecycle. The HPE ProLiant DL360 Gen11 is re-branded as a HPE ProLiant DL360T Gen11 to denote the HPE Trusted Supply Chain security enhancements. The DL360T is Trade Agreement Act (TAA) compliant. See “HPE Security” section within this document for more detail and learn more at <http://www.hpe.com/security>
- \*HPE offers multiple Trade Agreement Act (TAA) compliant configurations to meet the needs of US Federal Government customers. These products are either manufactured or substantially transformed in a designated country. TAA compliance is only provided when HPE options are included as part of factory integrated orders (CTO).
- All CTO servers are Energy Star 4.0 compliant, exclude configuration with GPU.
- Supported Rail kit to be defaulted for CTO Model in the configurator. But customer can deselect the Rail kit if the CTO Model is selected without Rack (Standalone server).
- If EDSFF CTO Model is selected, then Performance Heatsink or Closed Loop Liquid Cooling Heatsink Fan Bundle FIO Kit or Direct Liquid Cooling Module must be selected.

### Choose Core Options

- Mixing of 2 different processor models is not supported.
- CTO server will populate necessary fan kits per system thermal requirements and processor models, minimum as 5 standard fans. Dual processor configurations require 7 fans, either standard or high performance.
- If Processor Wattage is less than or equal to 185W, then "Standard Heatsink" and "Standard Fan" must be selected. Configurator to default "Standard Heatsink" and "Standard Fan". But Customer is allowed to remove and select "Performance Heatsink or DLC Module" and "Performance Fan" upon Processor selection.
- If Processor Wattage is more than 185W and less than or equal to 270W, then "Performance Heatsink (P48095-B21)" and "Performance Fan (P48908-B21)" must be selected. Configurator to default "Performance Heatsink" and "Performance Fan Kit" upon Processor selection. But customer should be allowed to remove and select DLC Module and "Performance Fan" upon Processor selection.
- If Processor Wattage is more than 270W, then "Closed Loop Liquid Cooling" (P48906-B21) or "DLC Module" must be selected. Configurator to default "Closed Loop Liquid Cooling" upon Processor selection and allow the customer to remove and select "DLC Module" and "Performance Fan".
- In 300W processor one socket configuration, the air cooling with Performance Heatsinks & Performance Fan Kits can be supported together. Field upgrade to two socket is not supported with air cooling solution.

- If 350W Processor (excluding Intel Open-loop Liquid Cooling CPU 6458Q/ 8470Q) is selected with Closed Loop Liquid cooling, then Maximum 10x SFF NVMe drive or 20x EDSFF can be selected. Or DLC module must be selected for SFF or EDSFF drives models.
- For Fan selection impact from memory capacity, pls refer to the support matrix in Fan Kit section
- See Networking section for constrained high speed networking adapter
- For GPU selection, pls refer to the support matrix in GPU section
  - In 8SFF CTO Model, if the Graphics Option is selected with the Processor that is more than 270W, then Maximum of 8 NVMe/ SAS/ SATA drives can be selected.
  - In EDSFF CTO Model, if the Graphics Option is selected with Processor Wattage is more than 270W, then DLC Module & Performance Fan Kit must be selected

### Processor

- Please select one or two matching processors.  
For example: for a single Xeon-Platinum 8570 processor configuration select 1x P49606-B21. If dual Xeon-Platinum 8570 processor configuration, select 2x P49606-B21.

- HBM Memory Modes support (Three modes)
  - o HBM Only (memory size equals HBM memory capacity. It only provides best performance when workloads fit into 64GB of capacity):  
Exists when system memory is removed as Qty 0. HBM caches DDR (symmetric DDR population required). No support for Intel® SGX and MKTME. The BIOS setting can be refreshed as "HBM Only" after system reboot. In RBSU, the HBM Memory Mode is shown as "1LM", meaning One Level Memory.
  - o Flat Mode (memory size equals System memory Plus HBM memory. DDR memory can be added for workloads needing capacity exceed 64GB):  
Default setting from factory shipment if system memory to be minimum Qty 1. HBM and DDR exposed as separate regions. A higher performance can be achieved than Cache mode. Intel® SGX and MKTME are supported in DDR region. The HBM Memory Mode is shown as "1LM", meaning One Level Memory.
  - o Cache Mode (memory size equals System memory only, as HBM memory is hidden and is functioning as a cache. Cache mode provides improved performance when workloads need above 64GB of capacity) :  
No support for Intel® SGX and MKTME. In RBSU, the HBM Memory Mode is shown as "2LM", meaning Two Level Memory. When the system memory are populated, Cache Mode can be selected when the configuration meets below two requirements, incl. System Memory population requirement and the specific ratio of System Memory. Otherwise, will be configured as Flat Mode instead.
    - To meet below system memory population requirement from Intel, one socket scenario.  
Also with system DIMM Qty to be only a 4, 8 or 16.

- The Ratio of “System memory “ HBM memory” is in 2:1 or 64:1. Meaning the memory population in “one socket” needs to be:
  1. DDR5 16GB with min Qty 8 (System memory 16GB x8 : HBM memory 64GB = 2:1), or
  2. DDR5 32GB with min Qty 4 (System memory 32GB x4 : HBM memory 64GB = 2:1). or
  3. DDR5 256GB with Qty 16 (System memory 256GB x 16 : HBM memory 64GB = 64:1)
  4. Duplication of DDR5 system memory is required in two sockets configuration

– HPE ProLiant DL3XX Gen11 Cache Mode for High-Bandwidth Memory FIO Trigger System Setting (P65886-B21) is available for customer self-configuration which allows Cache Mode to be default setting, if the system memory population meets above requirement.

#### Notes:

Configuration with thermal consideration

- If Performance Heatsink or DLC Module is selected, then Performance Fan must be selected and vice versa.
- If DLC Module is selected, then "HPE ProLiant Direct Liquid Cooling 450mm Female-male Connection Quick Disconnect Tube Set FIO Kit (P62046-B21)" must be selected. (See Power and Cooling solutions).

- For one socket processor only configuration at 300W, Performance Heatsink & Performance Fan Kit can be supported together.
- only configuration at 300W, Performance Heatsink & Performance Fan Kit can be supported together.
- Max 1 of Liquid cooling can be selected from the below: "Closed Loop Liquid Cooling", or "DLC CPM from external NS204i-u cage" or "DLC CPM from PCIe Slot".
- If NVMe/ SAS4 is selected, then Performance Heatsink or Closed Loop Liquid cooling Heatsink or DLC Module must be selected.

- "PCIe DLC Module" contains 2 Cold Plate Module and 1 Quick Disconnect Module.
- If "PCIe DLC Module" is selected, then
  - either "Secondary LP Riser" must be selected or "Secondary FH Riser" needs to be selected. PCIe Slot 2 is still available for external NS204i-u OS Boot device, or available for other HH PCIe adapters, when the "SecondaryLP Riser" is selected for the "PCIe DLC Module" installation. Yet PCIe slot# 3 cannot be used. This must be considered for all PCIe card selection.

#### HPE DLC Infrastructure

- HPE ProLiant DL3XX Gen11 Direct Liquid Cooling (DLC) solution requires at least one liquid cooling infrastructure items as follows: HPE Rack in 800mmx1200mm (options listed below), Rack Manifold, CDU, Primary Hose Kit and Secondary Hose Kit in order to function. Without above rack infrastructure to be selected, an unbuildable configuration will be triggered in this order.
  - DLC Rack options
    - Rack 42U 800mm x 1200mm Ent G2 (applicable for DL3XX Gen11 DLC)
    - Rack 48U 800mm x 1200mm Ent G2 (applicable for DL3XX Gen11 DLC)

## Core Options

- The DLC Rack Infrastructure setting is relatively complex, and needs to be conducted by HPE Service with a complete enablement of DLC Rack solution. Major factors impact the DLC Rack Infrastructure setting are listed below.
  - o The connectivity of server to manifold
  - o The DLC rack capability (liquid supply temperature, flow rate in each loop and CDU capability)
  - o The CDU parameter setting (liquid type, server units in rack, and any mixing servers)
- If customer has ordered from HPE previously and already has this basic infrastructure on site, pls get unbuildable exception approval from ProLiant Product Management Team. We can ship a standalone unit as an upgrade as exception, without this infrastructure the server DLC solution will not function.
- If customer selects “PCIe DLC Module” or “NS204i-u Cage DLC Module” which is a Direct Liquid Cooled solution (DLC) then
  - o Either DLC Solution is supported with specific Racks only. (as mentioned above)
  - o Or server is ordered as Standalone (without any HPE Rack), then “DL360 Gen11 DLC support requires liquid cooling infrastructure items as follows: HPE Rack, Rack Manifold, CDU, Primary Hose Kit and Secondary Hose Kit in order to function. If customer already has the infrastructure to support DLC on site, then server can be shipped as a standalone unit as an upgrade. Server will not function without the infrastructure for DLC

- [Document - HPE ProLiant and X86 Servers and Options | HPE Support](#)

### Notes: Usage

- Closed-Loop Liquid Cooling Heat Sink is subject to maximum usage limitation as 5 years of operation
- The HPE DL360 Gen11 Closed-loop Liquid Cooling Heat Sink Fan FIO Bundle kit contains paired (2) cold plates (1 per CPU) each with a pump, Tubes, (7) 4028 fans and a radiator. The LC Heat Sink option is designed to cool down the processor effectively using cooled inlet air. It would benefit to the Processor temperature yet the internal radiator would increase the flow resistance and reduce the airflow to downstream components inside the server
- If Processor Wattage is more than 270W, then LC Heat Sink Kit must be selected. This applies to all processor SKUs for DL360 Gen11 including High Bandwidth Memory (HBM) processors.
- One processor configuration can be supported without filed upgrade to the 2<sup>nd</sup> processor, and support up to two processors
- If Closed-loop Liquid Cooling HeatSink Fan FIO Bundle Kit is selected, then any Fans (Standard Fan Kit or High Performance Fan Kit) cannot be selected.
- If Liquid Cooling HeatSink Fan FIO Bundle Kit is selected, then “Standard heat Sink” or "High Perf Heat Sink" cannot be selected.
- Max 1 of Liquid cooling bundle kit can be selected from the below:
  - o Closed Loop Liquid Cooling
  - o DLC Module from NS204i-u Cage
  - o DLC Module from PCIe slot

### Configuration with thermal consideration

- If Closed Loop Liquid cooling is selected with specific high speed Networking/ InfiniBand, then EDSFF or SFF NVMe drive cannot be selected.
- If Closed Loop Liquid Cooling is selected with 256GB DIMM and Rear NS204i-u, then Maximum NVMe drive limit will be reduced from 10 to 4.

## Core Options

- EDSFF CTO Model: If 350W CPU is selected with Closed Loop Liquid cooling, then 256GB DIMM cannot be selected.
- EDSFF Model: If 256GB DIMM and Rear NS204i-u are selected, then DLC Module must be selected.
- For 8SFF CTO Model: If “HPE IB NDR 1p OSFP MCX75310AAS Adptr” is selected with Closed Loop Liquid cooling, then Maximum of 8 NVMe can be selected.
- For EDSFF CTO Model: If “HPE IB NDR200 1p OSFP MCX75310AAS Adptr” is selected with Closed Loop Liquid cooling, then EDSFF drives cannot be selected.
- For 8SFF CTO Model: If the Nvidia Graphics Option is selected with Closed Loop Liquid cooling, then Maximum 8 quantity of NVMe/ SAS/ SATA drives can be selected.
- EDSFF CTO Model: If the Nvidia Graphics Option is selected with Closed Loop Liquid cooling, then EDSFF drives cannot be selected.

### Design details

- The HPE DL360 Gen11 Closed-loop Liquid Cooling Heat Sink Fan FIO Bundle kit is designed as Factory Installation only & is not designated as a Customer Self-Repair (CSR) part to prevent damage to CPUs when customer is conducting the field upgrade on the Liquid Cooling modular itself or CPUs.
- The cooling liquid used in the liquid cooling heatsink is a mixture of purified water and ethylene with additional additives for corrosion resistance. The cooling liquid is not corrosive for human body, but to avoid the risk of connection or damages in a longer term, it is recommended to use hand protection in the form of chemically resistant gloves and to wash hands with plenty of water after contact. Be sure to avoid any eye contact. If eye contact occurs accidentally, immediately flush eye with plenty of water or seek for medical attention of any discomfort persists.
- There is no leak detection capability, yet the pumps inside of the system are redundant. If a pump or any of the components inside the solution fail, the CPU temperature or internal server temperature may increase leading to a iLO alert message.

### HPE Warranty

- The HPE DL360 Gen11 Closed-loop Liquid Cooling Heat Sink Fan FIO Bundle kit is offered with Standard (3/3/3) Warranty support along with the server. Customers are able to purchase extended support for years (4) and (5).
- This Closed-loop Liquid Cooling Solution is subject to a maximum usage (operational) limitation not to exceed (5) years and required to be replaced when this time limit has been reached. Parts and components that Hewlett Packard Enterprise determines have surpassed the standard (3) years warranty\* will not be provided, repaired, or replaced under warranty coverage. Contact your local HPE sales representative for additional information.

### In addition:

\*Or to the extended (4) or (5) years if warranty contract purchased, and subject to the maximum usage (operation) limitation of (5) years. For more details, please refer to the warranty terms for other options available from Hewlett Packard Enterprise.

### HPE Tech Care

- Tech Care contract supersedes the warranty terms
- The (6) and (7) year support is provided as a duration choice under Tech Care instead of Warranty. Customer buys Tech Care with equal or greater than 4 years, covers the (6) and (7) -year scenario.
  - o Customers with <= (3) year Tech care or Warranty-only
    - If the CL LC Heat Sink fails <= (3) year, HPE will have to provide service to customers.

Core Options

- If the CL LC Heat Sink fails > (3) yearr, the cost is on the customer and te service & material expense will be charged if the customer calls
- o Customers with >= (4) year Tech care, or current Tech Care support contract of any kind
  - If the CL LC Heat Sink fails inside the Tech care period, HPE will provide service & cover the expense for customers, except the stated limitation on Maximum Usage Limitation.
  - If the Heat Sink works properly and reaches (5) year of usage time, customer can call the HPE representative for the replacement starting from (6) months piror to the (5) year.
  - If customer decides to ignore the maximum usage limitation notification and without contact HPE, customer will ow the liability & expense associated.

For more information, please see the [HPE DDR5 Smart Memory QuickSpecs](#)

### Notes:

- The maximum memory speed and capacity is a function of the memory type, memory configuration, and processor model.
- Quantity of memory DIMMs selected per socket must be 1, 2, 4, 6, 8, 12 or 16.
- x8 and x4 cannot be mixed.
- 3DS and non-3DS Memory cannot be mixed.
- Mixing of different Rank Memory is not allowed if less than 16 quantity of Memory is selected for 1 Processor configuration.
- Mixing of different Rank Memory is not allowed if less than 32 quantity of Memory is selected for 2 Processor configuration.
- If different Rank Memory are mixed, then quantity of each Memory part number must be same.
- If Memory Fault Tolerance is selected then only x4 memory options can be selected.
- 4800 MT/s memory SKUs offer a transfer rate of 4800 MT/s at 1 DIMM per channel and 4400 MT/s at 2 DIMMs per channel.
- The maximum memory speed is a function of the memory type, memory configuration, and processor model.
- Long boot time may be introduced because of DDR5 initialization takes much longer than last generation DDR4, as an industry impact. HPE ProLiant server boot times will go through multiple reboots during POST for default restore.
- A longer lead-time would be expected in high capacity DIMMs depending on vender supply.

### Notes:

- General RAID rules:
- Only a single set of RAID will be offered and will only be applied to all applicable drives installed in a server.
- RAID requires selection of a Smart Array controller and a specific number of matching drives. (i.e same part number)
- If RAID is selected, and only SAS OR SATA OR NVMe drives are configured, then all drives must be the same part number. (i.e., matching drives)
- If RAID is selected and both SAS AND SATA drives are configured, then only the SAS drives will be used in the RAID set. (SAS drives must be the same part number; SATA drives can vary in part numbers)
- If RAID is selected and NVMe, SAS AND SATA drives are configured, then only the NVMe drives will be used in the RAID set. (NVMe drives must be the same part number; SAS & SATA drives can vary in part numbers)
- RAID must be selected if both Factory Installed OS and Smart Array controller (embedded or otherwise) are present.
- RAID 0 requires at least 1 drive.
- RAID 1 requires at least 2 or even a number of drives.
- RAID 1 with Spare requires at least 3 drives
- RAID 5 requires at least 3 drives.
- RAID 5 with Spare requires at least 4 drives.
- RAID 6 requires at least 4 drives.
- If SR932i-p/ MR416i-p/ MR416i-o/ MR408i-o is the Primary controller, then all RAID levels are allowed.
- If MR216i-o/MR216i-p/ Intel® VROC Standard is the primary controller, then only following RAID levels are allowed: 0, 1 (available from RAID FIO settings at HPE factory).
- The Intel® VROC Standard is available for RAID support 0, 1, 5 in the field.
- If Intel® VROC Premium is the primary controller, then the following RAID levels are allowed: 0, 1, 5 (available from RAID FIO settings at HPE factory).
- The Intel® VROC Premium is available for RAID support 0, 1, 5, 10 in the field.
- If Direct Attach is the Primary controller, then RAID is NOT allowed.
- If RAID is being selected in a configuration with Intel® VROC and internal controller, then Customer Defined RAID Setting (389692-B21) must be selected.
- For HPE Customer Defined RAID Setting (389692-B21) only:
  - o If this part number is selected then the following RAID rules do not apply:
    - Max of 1 RAID level per server.
    - All integrated hard drives must match
    - Minimum drive quantity requirement for each RAID level.
    - RAID level must be selected if Factory Installed OS is present and Smart Array SAS controller (embedded or otherwise) is the primary controller.
  - o If this part number is selected, then at least 1 hard drive must be in the order.
  - o If this part number is selected, then preinstalled OS must be on the order.

## Core Options

- A Customer Intent Document (CID) must be supplied if this part number is ordered. This Customer Intent Document should include all details about the desired RAID custom configuration. (This includes drive part #s and quantities, RAID levels desired, which drives should be applied to each RAID level, and if a preinstalled OS has been ordered - which RAID set it should be installed on )
- If "HPE Customer Defined RAID Setti ALL" is selected with one Internal controller. HPE Recommends using below standard RAID Settings.
  - 339777-B21 - HPE RAID 0 Drive 1 FIO Setting
  - 339778-B21 - HPE RAID 1 Drive 1 FIO Setting
  - 339779-B21 - HPE RAID 5 Drive 1 FIO Setting
  - 339780-B21 - HPE RAID 5 w/SP Drive 1 FIO Setting
  - 339781-B21 - HPE Raid Adv Data Guarding FIO
- If RAID is being selected in a configuration with Intel® VROC and internal controller, then Customer Defined RAID Setting (389692-B21) must be selected.

## Networking

The thermal conditions variate as a combination of types of Networking PCIe OR OCP adapter in different DL360 Gen11 CTO Servers. In general:

- Standard Fan Kit cannot be selected when above 100GbE
- 256GB DIMM is not allowed when above 100GbE
- Ambient limitation will variate in the combination of Networking Adapter OR OCP bandwidth, DIMM capacity and cable type, incl. Direct Attach Copper (DAC) cable and Active Optical Cable (AOC)

A detailed ambient temperature recommendation upon high-speed networking adapters is described in a later session.

Default settings in 8SFF CTO Server and 4LFF CTO Server

- In 1 Processor configuration, "CPU1 to OCP2 x8 Enablement Kit" will be selected as default as "BCM5719 Ethernet 1Gb 4-port BASE-T OCP3 Adapter" is pre-selected at OCP Slot 2, to be defaulted in the configurator if 1 Processor is selected. Customer is allowed to remove if OCP NIC is not selected but need to be replaced by a PCIe standup NIC. Meanwhile, the "CPU1 to OCP2 x8 Enablement Kit" will be removed.
- "CPU2 to OCP2 x8 Enablement Kit" or "CPU2 to OCP2 x16 Enablement Kit" must be selected if OCP NIC is selected in 2 Processors configuration. "CPU2 to OCP2 x8 Enablement Kit" to be defaulted in the configurator if 2 Processors are selected. User should be allowed to remove "CPU2 to OCP2 x8 Enablement Kit" and should be forced select "CPU2 to OCP2 x16 Enablement Kit" if OCP NIC is selected. Customer is allowed to remove if OCP NIC is not selected but need to be replaced by a PCIe standup NIC. Meanwhile, the "CPU2 to OCP2 x8 Enablement Kit" will be removed.

**Notes: Exception: Only x8 PCIe5.0 lanes each in the 2 OCP Slots from 20EDSFF CTO Server.**

### OCP3.0 Enablement Kit details

- In 1 Processor configuration, “CPU1 to OCP2 x8 Enablement Kit” will be selected as default as “BCM5719 Ethernet 1Gb 4-port BASE-T OCP3 Adapter” is pre-selected at OCP Slot 2, to be defaulted in the configurator if 1 Processor is selected. Customer is allowed to remove if OCP NIC is not selected but need to be replaced by a PCIe standup NIC. Meanwhile, the “CPU1 to OCP2 x8 Enablement Kit” will be removed.
- “CPU2 to OCP2 x8 Enablement Kit” or “CPU2 to OCP2 x16 Enablement Kit” must be selected if OCP NIC is selected in 2 Processors configuration. “CPU2 to OCP2 x8 Enablement Kit” to be defaulted in the configurator if 2 Processors are selected. User should be allowed to remove “CPU2 to OCP2 x8 Enablement Kit” and should be forced select “CPU2 to OCP2 x16 Enablement Kit” if OCP NIC is selected. Customer is allowed to remove if OCP NIC is not selected but need to be replaced by a PCIe standup NIC. Meanwhile, the “CPU2 to OCP2 x8 Enablement Kit” will be removed.
- Exception: Only x8 PCIe5.0 lanes each in the 2 OCP Slots from 20EDSFF CTO Server.

## Power and Cooling

### Power Supplies

#### European Union Erp Lot 9 Regulation

Beginning on January 1<sup>st</sup>, 2024, units sold into the European Union (EU), European Economic Area (EEA), the United Kingdom, or Switzerland must include more efficient AC power supplies: 94% for multi-output and 96% for single-output. HPE Flexible Slot power supplies are single-output, and part numbers 865438-B21, P03178-B21, and P44712-B21 are 96% efficient, thus meeting requirements.

HPE is on target to fulfil compliant systems ahead of time and will begin enforcing these requirements in advance to satisfy requests with the current power supplies by the set deadline.

## Core Options

Please select one or two power supplies from below in the system configuration.

### Notes:

- Mixing 2 different power supplies is NOT supported.
- Please refer to “Factory Configuration Setting” section regarding “HPE CE Mark Removal FIO Enablement Kit (P35876-B21)” for non- EU Erp Lot 9 configuration.
- In order to select the right size power supply for your ProLiant Server it is highly recommended to use "HPE Power Advisor" located at <https://poweradvisorex.it.hpe.com/?Page=Index>

HPE Flexible Slot (Flex Slot) Power Supplies share a common electrical and physical design that allows for hot plug, tool-less installation into HPE ProLiant Gen11 Performance Servers. Flex Slot power supplies are certified for high-efficiency operation and offer multiple power output options, allowing users to "right-size" a power supply for specific server configurations. This flexibility helps to reduce power waste, lower overall energy costs, and avoid "trapped" power capacity in the data center.

Prior to making a power supply selection it is highly recommended that the HPE Power Advisor is run to determine the right size power supply for your server configuration. The HPE Power Advisor is located at: [HPE Power Advisor](#)

HPE ProLiant servers ship with an IEC-IEC power cord used for rack mounting with Power Distribution Units (PDUs). Visit [HPE power cords and cables](#) for a full list of optional power cords. The standard 6-foot IEC C-13/C-14 jumper cord (A0K02A) is included with each standard AC power supply option kit.

## Memory

### Memory Population guidelines

Front End / HPE ProLiant DL360 Gen11

#### Notes:

- Listed below are general Memory Module Population Rules supported by the processor for reference.
- There is no longer a need to install DIMMs in pairs in non-RAS modes.
- The same information is displayed alternatively by rank, by speed, or by qty. That is, when viewing by rank, selecting a particular rank will then show the DIMM qty vs DIMM speed tradeoff/combinations. All DIMMs must be either all DDR5 DIMMs or DDR5 and Crow Pass DIMMs.
- There should be at least one DDR5 DIMM per socket.
- When one DIMM is used in a channel, it must be populated in DIMM slot farthest away from the CPU (DIMM slot 0) of a given channel.
- For 16 + 0 configuration with 1R + 2R mixed rank population, on each channel always populated the higher electrical load (2R) in DIMM0 followed by single rank DIMM in DIMM1.
- A maximum of 8 logical ranks (ranks seen by the host) per channel is allowed.
- For a DDR5 DIMM and Crow Pass DIMM in a channel, the DDR5 DIMM must be populated in the farthest DIMM slot (0), while CPS has to be in the nearest slot (1).
- All DIMMs in a Processor socket must have the same number of ranks (unless explicitly specified otherwise).
- x8 DIMMs and x4 DIMMs cannot be mixed in the same channel or same Processor socket.
- Mixing of non-3DS and 3DS RDIMMs is not allowed in the same channel, across different channels, and across different sockets.
- 9x4 RDIMMs cannot be mixed with another DIMM types (Crow Pass 10x4RDIMMs or Non 9x4 RDIMMs).
- All DDR5 DIMMs must operate at the same speed per Processor socket.
- Rank mixing is not allowed on a channel except for Standard RDIMM 1 Rank + 2 Rank combination, when all 16 DIMMs for a Processor socket is populated.
- Mixing vendor is allowed for RDIMMs, but it is not allowed for 3DS RDIMMS

### General Memory Population Rules and Guidelines

- DIMMs should be installed in quantities of even numbers.
- Install DIMMs only if the corresponding processor is installed.
- If only one processor is installed in a two-processor system, only half of the DIMM slots are available.
- To maximize performance, it is recommended to balance the total memory capacity between all installed processors.
- When two processors are installed, balance the DIMMs across the two processors.
- White DIMM slots denote the first slot to be populated in a channel.
- Mixing of DIMM types (UDIMM, RDIMM, and LRDIMM) is not supported.
- The maximum memory speed is a function of the memory type, memory configuration, and processor model.
- The maximum memory capacity is a function of the number of DIMM slots on the platform, the largest DIMM capacity qualified on the platform, and the number and model of installed processors qualified on the platform.

### Acoustic Noise

Listed are the declared mean A-Weighted sound power levels (LWA,m), declared average bystander position A-Weighted sound pressure levels (LpAm), and the statistical adder for verification (Kv) is a quantity to be added to the declared mean A-weighted sound power level. LWA,m when the product is operating in a 23°C ambient environment. Noise emissions were measured in accordance with ISO 7779 (ECMA 74) and declared in accordance with ISO 9296 (ECMA 109). The listed sound levels apply to standard shipping configurations. Additional options may result in increased sound levels. Please have your HPE representative provide information from the HPE EMESC website for further technical details regarding the configurations listed below.

#### Notes:

- Acoustics levels presented here are generated by the test configuration only. Acoustics levels will vary depending on system configuration. Values are subject to change without notification and are for reference only.
- The declared mean A-weighted sound power level, LWA,m, is computed as the arithmetic average of the measured.
- A-weighted sound power levels for a randomly selected sample, rounded to the nearest 0,1 B.
- The declared mean A-weighted emission sound pressure level, LpA,m, is computed as the arithmetic average of the measured A-weighted emission sound pressure levels at the bystander positions for a randomly selected sample, rounded to the nearest 1 dB.
- The statistical adder for verification, Kv, is a quantity to be added to the declared mean A-weighted sound power level, LWA,m, such that there will be a 95 % probability of acceptance, when using the verification procedures of ISO 9296, if no more than 6,5 % of the batch of new equipment, has A-weighted sound power levels greater than (LWA,m + Kv).
- The quantity, LWA,c (formerly called LWAd), can be computed from the sum of LWA,m and Kv.
- All measurements made to conform to ISO 7779 / ECMA-74 and declared to conform to ISO 9296 / ECMA-109.
- B, dB, abbreviations for bels and decibels, respectively, where 1 B = 10 dB.
- The results in this declaration apply only to the model numbers listed above when operating and tested according to the indicated modes and standards. A system with additional configuration components or increased operating functionality may increase the noise emission values.
- System under abnormal conditions may increase the noise level, persons in the vicinity of the product [cabinet] for extended periods of time should consider wearing hearing protection or using other means to reduce noise exposure.

### Environment-friendly Products and Approach - End-of-life Management and Recycling

Hewlett Packard Enterprise offers **end-of-life product return, trade-in, and recycling programs** in many geographic areas, for our products. Products returned to Hewlett Packard Enterprise will be recycled, recovered or disposed of in a responsible manner.

The EU WEEE directive (2002/95/EC) requires manufacturers to provide treatment information for each product type for use by treatment facilities. This information (product disassembly instructions) is posted on the **Hewlett Packard Enterprise web site**. These instructions may be used by recyclers and other WEEE treatment facilities as well as Hewlett Packard Enterprise OEM customers who integrate and re-sell Hewlett Packard Enterprise equipment.
