

Wacom Art Pen

Overview

Most designers know the classical felt marker – basically a high-value felt pen with an angled tip that enabled the designer to draw thick and fine strokes by simply turning the marker by 180° along its longitudinal axis. With the new Art Pen, designers can enter the time capsule and get the good old marker feeling – with the advantages of the digital realm: This pen has – like its traditional counterpart – a broad, angled pen tip, which is made of either plastic or real felt. Additionally, the Art Pen is rotation-sensitive at 360°, so you can – if the software support rotation-sensitivity – change the width of your stroke by simply turning the pen's barrel – like with a real felt marker. You also can substitute a calligraphic fountain-pen with your Art Pen...

Functions

- Rotation-sensitive
- New Wacom Tip Sensor with 2,048 levels of pressure sensitivity
- Programmable double-side switch
- Eraser
- Tilt Sensitivity
- Tool ID
- Cord-/battery-less
- Wacom pen technology
