

The IT monitoring platform

Scalable. Automated. Extensible.

What is Checkmk?

Checkmk ensures that IT infrastructures run at peak performance, providing advanced monitoring of cloud, hybrid, and data center infrastructures, as well as modern containers and networks.

Monitor everything. Monitor cloud, hybrid, data center infrastructures, and anything in-between

Highly automated. Reduce grunt work with features such as auto-discovery and auto-configuration

Adaptable and extensible. Customize and extend thanks to the Checkmk API and open source code

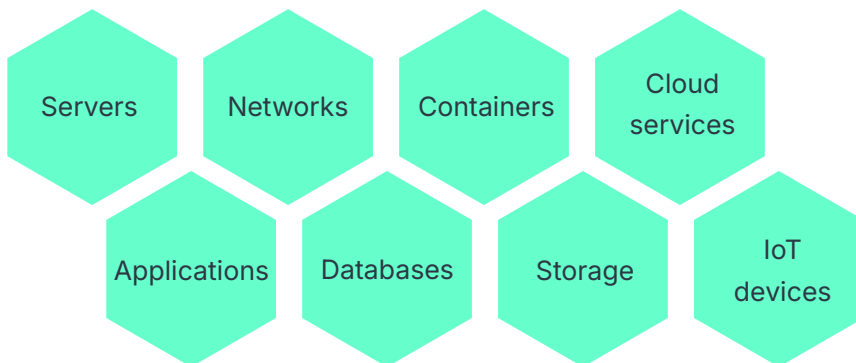

Fast deployment. Quickly deploy anywhere: servers, VMs, containers, or from AWS and Azure marketplaces

Smart, **granular alerts** reduce notification overload, automatically creating tickets in ITSM systems

What can I monitor with Checkmk?

Checkmk can monitor almost any IT asset **out-of-the-box** with its library of **2000+** vendor-maintained **plug-ins**.

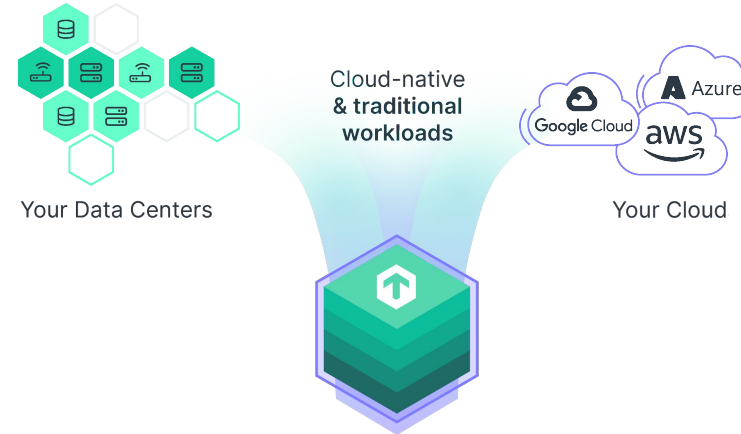

What makes Checkmk unique?

Transparent pricing model and **best price-performance ratio**

Your **one platform** for your data center and cloud
