- Supports display resolutions up to 1920 x 1200 at the local console and 1280 x 1024 at the remote IP console
- On-screen display for ease of use

Technical details

The KVM Switch CAT-32 IP allows administrators to access and control up to 32 computers using a single or remote KVM console connected to one compact, high density control centre.

The switch occupies only a single 1U space in a 19" rack and makes use of CAT5e/6 structured cabling to provide the long distance connections to the computers. An optional IP Remote Access Module can be installed which allows the connected computers to be accessed from any remote computer on the LAN or via the internet using a web browser.

More Information

- 32 UTP CAT5e/6 server ports in a compact 1U, 19" rackmount design
- Dual console operation option: local console connected via USB or PS/2 and VGA plus an access slot for an optional KVM over IP module
- Supports USB & VGA and PS/2 & VGA equipped computers using the appropriate computer modules
- Hot plug support allows computers to be added or removed without powering down the switch
- No software required - easy computer selection via the on-screen display or keyboard hot keys
- Each connected computer can be individually named in the on-screen display menu
- Adjustable auto-scan mode between 5 and 104 seconds
- Dedicated daisy chain port allows up to 8 KVM switches to be connected together providing KVM console access to up to 256 computers
- Supplied with 19" rackmount brackets, 20cm daisy chain cable and 1m firmware update cable
- Compatible with all commonly used operating systems
