Power BI – DAX Training

Business Intelligence solutions analyze increasing amounts of data, that nowadays can come from every corner of your company, in various forms and shapes.

And that is exactly where Power BI steps in. As one of the best solutions of the market, it is a true all-in-one tool, from the extraction and transformation of your data from various sources, to AI powered visuals.

This advanced training provides a deep dive into DAX, Data Analysis Expressions. The objective is that you don't hit any limit in creating calculations for your Power BI reports.

For this training we assume that you already have a thorough understanding of Power BI as well as an overview of DAX – both of which you can get through our basic and advanced Power BI training packages.

We offer …

- ✓ A thorough overview of DAX concepts and functions
- ✓ Numerous practical examples to help you quickly understand complex concepts
- ✓ An interactive approach with many practical challenges and exercises
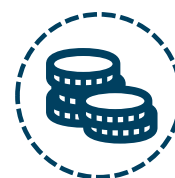

We discuss…

- ✓ Overview of DAX
- ✓ The context in DAX
- ✓ Relationships in DAX
- ✓ CALCUALTE – one of the key functions
- ✓ Using variables
- ✓ X-Functions
- ✓ Time Intelligence
