DeepL API: The easiest way to create multilingual websites, apps, and more

The DeepL API brings high-quality translation capabilities directly to your websites and applications in 30+ languages.

Key use cases

- **Scalable website translation:** Localize websites and expand to new markets efficiently and at scale—even in sectors like e-commerce and news media with a large catalog of dynamic content.
- **Seamless company communications:** Integrate DeepL's translation technology directly into your company's systems. Enable your global teams to communicate seamlessly and with maximum data security.
- **Multilingual products made easy:** Translate chat conversations to connect users across language barriers in real time. Localize product reviews with the click of a button. Make translation a differentiating feature.

Why the DeepL API?

High-quality text and document translations

DeepL [consistently outperforms the competition](#) in translation quality—and not only for text translation. The API also supports [.docx](#), [.pptx](#), [.txt](#), [PDF](#), and [HTML files](#).

Customization with glossaries

[Specify your own translations for words and phrases](#), and customize your translations consistently and at scale.

Maximum data security

DeepL API Pro texts are deleted immediately after translation, and DeepL adheres strictly to EU data protection laws and ISO 27001. [Learn more about data security at DeepL.](#)

People and their communication challenges are at the heart of everything we do. Founded in 2017 by German researchers, DeepL is the world's most accurate AI technology, enabling real-time human-sounding translation. Accessible across the web translator, browser extensions, desktop and mobile apps, and an API, DeepL supports a best-in-class translation experience in over 30 languages.
