

# Corporate License

Designed for Teams with Multiple Users  
Where Multitasking Is a Must

- ✓ 30 Licensed Users
- ✓ 3 Concurrent Connection Channels
- ✓ Unlimited Endpoints

## Corporate License Highlights for 30 Licensed Users

- ✓ **30 licensed users**, so 30 users on your team gets a licensed TeamViewer account.
- ✓ **3 concurrent connection channels**, so at any given time, 3 of your licensed users can each use their own channel to open concurrent connection channels from their computers or mobile devices. Each person can then connect to up to 15 devices, in separate tabs, for productive multitasking.
- ✓ **Unlimited endpoints**, so you can remotely access, support, and control as many attended devices as needed. Attended devices, such as desktop computers, laptops, phones\*, or tablets\* must have the TeamViewer QuickSupport app installed on them and require another person to accept an incoming remote connection.
- ✓ **500 managed devices**, so you can remotely access, support, and control unattended devices, such as servers, point of sale (POS) systems, digital signage, or kiosks. Unattended devices must have the TeamViewer Host app installed on them and do not require another person to accept an incoming remote connection request.
- ✓ **Reporting**, so you can monitor incoming connections to each device and automatically log every outgoing connection made by licensed users for compliance, billing, auditing, and productivity purposes.
- ✓ **Mass deployment**, so you can silently and instantly install the TeamViewer Host app on hundreds (or even thousands) of devices, for easy unattended access across your network.

*\*Remote Connections to mobile devices from computers require the Mobile Device Support AddOn.*

# How it works

When accessing or providing remote support for devices, there's no charge to you or your support recipients to establish incoming remote connections. That means you can use your TeamViewer licensed user accounts to remotely access and support an unlimited number of endpoints (computers, servers, or mobile devices\*).

The Corporate plan comes with 3 concurrent connection channels, enabling 3 different licensed users to open their own concurrent connection channels and connect to up to 15 devices – all at the same time.

With 30 licensed users, each team member gets their own licensed TeamViewer user account.

Each concurrent connection channels lets you connect to up to 15 devices at a time.

Desktop and Laptop Computers

Servers

Mobile Devices\*

If your team needs more than 3 concurrent connection channels extra AddOn channels are available (a maximum of 10 channels can be used per Corporate License).

\*Remote connections to mobile devices from computers require the Mobile Device Support AddOn.

## TeamViewer Security

Your Security Is Our Top Priority

All remote sessions are secured by end-to-end encryption. Learn more about security at our [Trust Center](#).

# Available AddOns

Contact us for pricing  
[teamviewer.com/sales](https://teamviewer.com/sales)

## Mobile Device Support

Remotely access, manage, and control mobile devices running Android and iOS.

[teamviewer.com/mds](https://teamviewer.com/mds)

## Additional Concurrent Connection Channels

The number of concurrent connection channels determines how many licensed users can start connections from different devices at the same time. A total maximum of 10 concurrent connection channels are available for Corporate.
