

## Q-riser 50 Circular

Recycled monitor stand

We worry about the vast quantities of plastic that end up in our oceans and seas. That is why we developed our own line of circular products.

In addition to being made from 60% recycled material, they are also 100% circular.

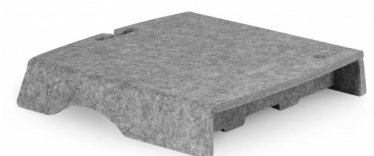

We advise having a screen that can easily be adjusted and tilted so that every user can adjust its height.

### Work at the right height with our circular monitor stand

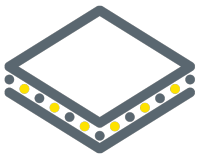

BakkerElkhuizen goes circular. With the Q-Riser 50 circular monitor stand, we are introducing a sustainable version of our own acrylate product. This laptop stand consists of compressed material made from recycled plastic bottles. By reusing plastic bottles, we are doing our part to reduce the amount of waste on land and in our oceans.

## An overview of the benefits

### Recycled material

Our Q-riser 50 Circular Monitor Stand consists of 60% recycled material (2.5 recycled PET bottles), but is completely recyclable!

### Circular

Plastic bottles are collected and processed into 'flakes'. These are processed into 'granulate'. This granulate eventually becomes a PET felt board. If you no longer use your product, you can return it to us for recycling. In short, 100% circular.

### Soft, yet strong!

Although the material appears soft, no compromises have been made for the required properties such as load-bearing capacity. These products are also very strong, just like acrylic!

### Price

This sustainable product does not cost more than the acrylate version of the same product.

### Colours

These products are available in different colors. We have light grey and green in our range as standard. We are happy to get in touch with you for other colors.

### At the right height

An optimal monitor position leads to less discomfort and complaints on the neck. Placing the monitor too low can lead to (strong) bending of the neck, as a result of which a higher muscle tension in the neck muscles.

## Knowledge Center

An ergonomic workspace enhances the comfort and productivity of DSE workers. It is easy to create the ideal workspace with a few minor adjustments. We develop and supply high-quality monitor stands for better and healthier workspaces...
