

CUSTOMIZE SIGNING WITH FOXIT ESIGN API

INTRODUCTION

Foxit eSign is a top choice in the electronic signature industry not just for its functionality but also for its custom solutions that enable businesses to prepare, send, sign, and manage important documents **their** way. When you incorporate eSigning into your business processes with Foxit eSign's powerful API, you integrate the optimal signing solution for your business and truly take control over document prep and completion.

With our Enterprise Plan, your business can integrate eSignatures directly into your own web applications and mobile applications, keep track of the document signing process in real time, and interface with any standard or bespoke backend system.

Our team of expert developers and solutions engineers are here to support your integration from start to finish and beyond. Not only is integrating with Foxit eSign easy, but you can ensure that your brand identity is maintained throughout the API integration process and your workflows supported. Additionally, you may update your systems when a document is signed by automatically storing it in a secure SFTP Server, as well as update any backend system with relevant information.

Selecting Foxit eSign for your electronic signature integration needs ensures a more hassle-free, cost-effective, and seamless experience for your entire team and customers.

SIMPLIFY DEVELOPMENT WITH OUR POWERFUL REST API

- Our intuitive APIs allow you to optimize and automate your eSignature workflows; any task that can be accomplished via our web interface can also be automated via our HTTPS REST API
- Minimize development time with our easy-to-use Developer Guide. Our Developer Guide provides clear instructions, sample use cases, and a sandbox environment for your team to make live requests as well as download the necessary guidelines
- Ensure that your team feels comfortable with leveraging our technology by using our SDKs for C#, Java, JavaScript, Python, Ruby, and PHP designed for easier integration
- When you use Foxit eSign's API, you team up with solution engineers and API experts who understand your needs and can support you from A-to-Z, from integration to deployment and beyond

STRENGTHEN YOUR BRAND THROUGH PERSONALIZED DESIGN OPTIONS

- Ensure a familiar and comfortable signing experience for your team and clients with a customized dashboard, personalized application colors, and logo addition
- Embed forms and documents directly into your website or application for a smooth and cohesive signing process
- Proactively suggest the next action for signers by redirecting to any portal or invoicing page following signature completion

AUGMENT SIGNING FOR THE ENTIRE COMPANY

- Use smart tags to automate document preparation with signature fields and other data fields
- Utilize data from your preferred customer relationship management (CRM) software to generalize on-demand and personalized documents
- Embed eSignature capabilities directly into your applications or website to streamline signing for customers all in one place
- Create a template library to provide easy access to commonly used documents and ensure team-wide consistency

SAVE MONEY WITH CUSTOM PRICING

- Enterprise-ready API pricing that is designed to meet your budgetary needs and support your company's financial goals for growth and advancement
- Rest easy knowing that there will be no pricing surprises; Foxit eSign API pricing is designed to be transparent, dependable, and scalable

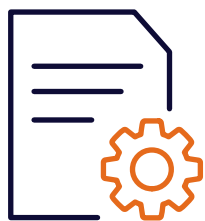

GET MORE DONE WITH CUSTOM APP INTEGRATION

- Make sure your representatives feel comfortable within their Foxit eSign portal by customizing your dashboard with personalized application colors and logo
- Embed any contract to be signed from within your own website; every header, sidebar, or button in the signing process can be customized to meet your branding guidelines
- Proactively suggest the next big action by redirecting signers to any portal page or invoicing page after signature

ENHANCE AND STREAMLINE USER MANAGEMENT

- User reports can be displayed directly in the app interface to view user information in a developer-friendly and easy to read format
- By utilizing API calls, invite users easily to join your organization and begin collection of important documents and contracts
- When you become a partner with Foxit eSign, you gain the ability to manage, create, change, activate/reactivate user licenses whenever needed

AUTOMATE REPORTING AND DOCUMENT ARCHIVAL

- View and analyze performance your way by downloading reports directly to Microsoft Excel and Google Sheets for easy viewing
- Automate sending and saving of completed documents and contracts directly to local SFTPS file servers

LOWER RISK WITH ENTERPRISE-GRADE SECURITY & COMPLIANCE

- Meet and exceed industry compliance requirements, such as HIPAA, FERPA, FINRA, 21 CFR Part 11, CCPA, and more
- Utilize features, such as knowledge-based authentication (KBA), to ensure easy compliance with IRS forms, FDA 21 CFR Part 11 documentation, banking documents and know your customer (KYC) requirements, and more
- Rest-assured knowing stringent SOC 2 Type 2 compliance and AICPA trust principles of privacy, confidentiality, security, processing integrity, and availability are strictly enforced with all documents
- Maintain local data residency with trusted SOC 2 Type 2 and PCI compliant U.S. and E.U. data centers
- Ensure optimal security and privacy with our strict network security rules and firewall controls, along with 256-bit encryption, which enables your documents to be locked and always secure

AUTOMATE WORKFLOWS BY LEVERAGING WEBHOOKS

- Once a document is completed, trigger the next desired task for automated completion, such as uploading data to a CRM or generating another document
- Webhooks enable the opportunity to share and send the document and envelope data you want in real-time with the apps and software you use
- Receive and monitor various notification types directly to individual channels through our provided developer portal
- By utilizing webhook secret keys you can better ensure the security and authentication of any utilized webhook notifications
