PRODUCT

The Reach Extra Long Articulating Arm is a mounting solution for our Tablet enclosures, various LCD monitors, TVs and screens. The Medical Reach arm can provide up to 4 feet of horizontal extension and can fold and swing out of the way.

An ideal option for securely mounting a patient bedside infotainment system or interactive touch screen, raised workstation or machinery monitoring system.

Our Hospital Extra Long Reach arm was designed for use in the healthcare field; it can be fastened behind or above a bed or dental chair while extending out for optimal position and viewing angles.

The Reach with movable articulating arms and cable management has a 75x75 and 100x100 VESA pattern and is suitable for all our enclosures, as well as numerous computers, monitors and screens with the same VESA pattern. The monitor mount has a wide range of motion and allows tilting and panning of the screen. The determination of the angle is ensured by clamping screws.

All tablet cases with 75 x 75 or 100x100 mm VESA pattern

PRODUCT

Movable monitor mount
