DriveLock
Application Control

Stay safe! Control all applications with dynamic whitelisting and intelligent rights management

securing your digital tomorrow

Challenges

Malware and unwanted applications can have devastating consequences for your business. That's why application control should be an important part of your security strategy.

You want maximum protection against cyberattacks, attacks from file-based and fileless malware, ransomware and advanced persistent threats (APTs).

You want to prevent insider threats, destructive actions or external attacks from succeeding.

You don't have enough IT security experts or resources.
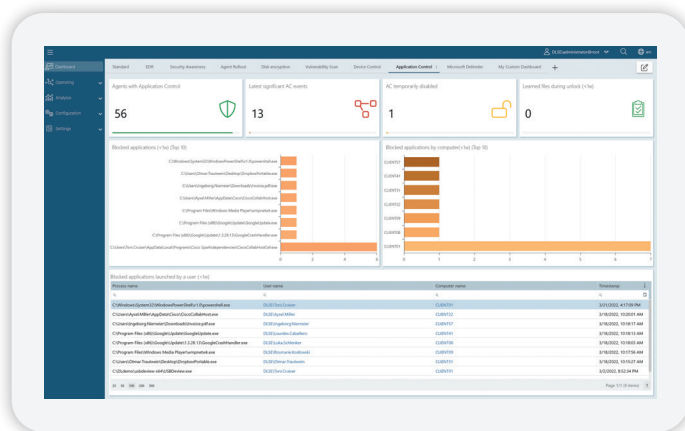

Our Solution

Block any application from running on your endpoints with Application Control from DriveLock

> Use of whitelists / blacklists or combination of both; minimal list maintenance effort.

> Centralized recording of potential executions with „audit only".

> Trains employees in secure handling of data and external data carriers.

> Simulation mode for setting the rules and regulations.

> Control the execution of dlls and scripts.

> Customized user notification and central dashboards with evaluation.

Advantages with DriveLock Application Control

Advanced and sophisticated protections against malware, ransomware and zero-day exploits

Integration into your UEM solution	Minimal administrative list maintenance through automatic learning	Reliable execution control of programs, libraries and scripts	Compliance with all legal requirements (GDPR)
