Colour	Unknown

Product Description

With support for the latest in biometric technology, the VeriMark™ Desktop Fingerprint Key puts business-class desktop security at your fingertips. Ideal for enterprise PC deployment, the VeriMark™ Desktop Fingerprint Key is FIDO U2F Certified and FIDO2 WebAuthn compatible. Windows Hello certified (includes Windows Hello for Business) for seamless integration. Also compatible with additional Microsoft services including Office365, Azure, Outlook and many more.

Features

- FIDO U2F certified and FIDO2 WebAuthn compatible for expanded authentication options, including strong single-factor (passwordless), dual, multi-factor and Tap-and-Go support across major browsers (for services leveraging the older FIDO U2F standard, instead of using biometric authentication, Tap-and-Go allows the user to simply place their finger on the VeriMark Desktop Fingerprint Key to enable a security token experience). Supports up to 10 fingerprints. We encourage you to view our listing of services under the support section (kensington.com/software/verimark-setup) of our site, to ensure you receive the best possible experience.

- Encrypted end-to-end security with Match-in-Sensor™ Fingerprint Technology combines superior biometric performance and 360° readability with anti-spoofing technology. Exceeds industry standards for false rejection rate (FRR 2%) and false acceptance rate (FAR 0.001%).

- Windows Hello certified (includes Windows Hello for Business) for seamless integration. Also compatible with additional Microsoft services including Office365, Azure, Outlook, and many more.

- Long (1.2m/3.9') USB cable provides the flexibility to be placed virtually anywhere on or near the desktop.

- Can be used to support cybersecurity measures consistent with (but not limited to) such privacy laws and regulations as GDPR, BIPA, and CCPA.

- Two-year warranty means you can rest assured knowing you're covered by Kensington.
