Inspire the Next

SIMPLY BECAUSE, you decide how you want to use Qiata: whether via the web browser, the free Outlook AddIn or the also free desktop client for Windows and MacOS. You work regularly in your home office and on the road? PersonalSpace gives you easy access to your files with a personal storage space. No matter where, no matter when.

SECURE BECAUSE, all files are encrypted without exception and at all times at Qiata. Not only during the transfer, but also during later filing and archiving. Thanks to rights management, you are always the deciding authority as to which files may be viewed by whom, when and from where.

TRACKABLE BECAUSE, all transfer activities (except PersonalSpace) are logged and thus can be traced at any time. Every data movement is recorded securely and reliably. In the age of global digitalization, companies' network structures are increasingly expanding. As a result, the administrative challenge of keeping networks traceable at all times despite their growing dimensions is also growing at the same time. With Qiata, this is easier than ever.

FLEXIBLE BECAUSE, through the API interface already existing systems such as accounting software, ERP solutions and store systems can be connected smoothly. Problems with transfers of larger files such as videos and images with high resolution? Not with Qiata! Send even larger-than-average file formats to the desired recipients. Problem-free, fast and secure.

CUSTOMIZABLE BECAUSE, during file transfers, your corporate design is used throughout and an anonymous cloud design is not visible at any time. Through the continuous view of your corporate design with your own desired color selection even within the application (e.g. mail interface, folder view, etc.) an authentic recognition value of your company is guaranteed.

TEAMABLE BECAUSE, Qiata is not only the ideal solution for internal teamwork in a company, but also integrates external team members outside the company digitally, easily and securely into the respective processes. You decide at any time which team members, whether internal or external, may have access to which files. At the same time, with Qiata as a uniform solution, you ensure that all communication and data transfer is implemented in an audit-proof and GDPR-compliant manner.
