- Last number redial
- For PABX and PSTN operation
- Wall mountable
- Hearing aid compatible (HAC)
- Pulse dialling, tone dialling, flash time and emergency number adjustable
- Mute key with melody

Easy to use and multi-functional

The Gigaset DA510 is both PABX and PSTN compatible. This allows you to either connect straight to the public network, or hook the Gigaset DA510 up to an internal network of phones within the home or office. As well as being hearing aid compatible, the Gigaset DA510 also allows you to put callers on hold by pressing the mute key. Your contact will then hear a melody until you get back to them. Should you wish to modify the dialling method or flash time, these are also adjustable. Need to call back the last person dialled? Simply use the convenient last number redial function to get in contact with them again.

Simple and safe

The electronic key lock prevents unauthorised dialling. Should you still wish a child for example to be able to call you while the phone is locked, simply programme in a designated number and the any-key alarm will let them contact you on that number. Two pre-programmed emergency numbers, plus one of your choosing, can be dialled at all times except when any key alarm is activated. Don't want calls to certain numbers to be made? The call blocking feature allows you to block calls to certain numbers such as costly toll numbers.

Sounds you like

The Gigaset DA510 gives you a choice of ten melodies and four volumes (as well as ringer off option), so you are certain to find a combination you like. The visual call notification function ensures you won't miss calls even when the ringer is turned off. If you need a reliable, corded, desktop solution that lets you get in touch fast, then the Gigaset DA510 direct key phone is the one for you.

Choose the Gigaset DA510 for the reliability and ease of use of a corded phone, combined with the convenience of numerous direct call keys and many other features.
