# LAB-QUALITY, LONG-LASTING PRINTS – DELIVERED IN SECONDS

All the family can create lab-quality prints for albums, crafting, gifting and display with this fast, wireless and simple-to-use photo printer.

- **Beautiful photos, fast**  
Create vibrant lab-quality photos with 16.7 million colours. Fast dye-sublimation technology means ready-to-handle postcard-sized prints in 41 seconds.
- **Prints that last**  
Thanks to a special protective coating, your photos will last up to 100 years<sup>1</sup> when stored in an album. They're water, scratch and fingerprint resistant too.
- **Sizes to suit you**  
Print beautifully vibrant images in a range of sizes, ranging from postcard (100 x 148mm) to mini sticker (22 x 17.3mm), great for scrapbooking, crafting and gifting.
- **Simple wireless operation**  
Print simply and wirelessly from your smart device using the SELPHY Photo Layout app. Create customised prints with stamps, filters, pattern overcoats and share links with printed QR codes.
- **Space-saving and stylish design**  
This is a printer that's a pleasure to live with and simple to operate thanks to its compact size, large LCD screen, wireless connection and choice of three chic colour finishes.
- **Connect your way**  
Connect wirelessly to smart devices, computers and cameras<sup>2</sup>, or via USB-C for computers, cameras and USB flash drives. Or simply print direct from SD, SDHC and SDXC cards with the built-in reader.

### Footnotes:-

<sup>[1]</sup> To test the image permanence of prints that are stored in an album, we use an accelerated testing method similar to how the image permanence of silver-halide photo papers are measured when stored in dark places. Print samples are printed with the optical density of 1.0 (each Bk, C, M, Y). The samples are kept in a certain environment of high temperature and 50% humidity. The rate of the decrease in the optical density and rate of yellow discoloration are recorded. The recorded results are then converted to the length of time when print image is kept in an environment of 23°C/ 50% humidity. <Criteria for estimation of print longevity> The point where monochromatic/reflective optical density shows loss of 30% (starting density of 1.0).

<sup>[2]</sup> Print speed can vary dependent on data size, print method, memory card and capacity and is measured from start of printing excluding paper handling

<sup>[3]</sup> Requires adapter (sold separately)
