

# PRIVILEGE MANAGEMENT FOR WINDOWS & MAC

STOP MALICIOUS ATTACKS BY ENFORCING LEAST PRIVILEGE ON WINDOWS AND MAC SYSTEMS

## Granular Application Control

Reduce the risk of improper application usage by providing flexible, risk-based policies to enforce least privilege.

## Quick Start

Deliver fast time-to-value and minimize business disruption with built-in policies for immediate out-of-the-box deployments.

BeyondTrust Privilege Management for Windows & Mac elevates privileges to known good applications that require them, controls application usage, and logs and reports on privileged activities using security tools already in place.

## Features and Capabilities

- **Least Privilege Enforcement:** Elevate privileges to applications for standard users on Windows or Mac through fine-grained policy-based controls, providing just enough access to complete a task.
- **Seamless Application Control:** Deliver trust-based application whitelisting with a flexible policy engine to set broad rules. Tailored options enable organizations to choose automatic approval for advanced users – protected by full audit trails – or utilize challenge-response codes. Application whitelisting rules can be applied based on software origin as well.
- **Complete Auditing and Reporting:** Provide a single, unimpeachable audit trail of all user activity that speeds forensics and simplifies compliance.
- **Privileged Threat Analytics:** Correlate user behavior against security intelligence from best-of-breed security solutions to provide an overall picture of end-user risk.
- **Integrations with the Security Ecosystem:** Built-in connectors to a host of third-party solutions, including help desk applications, vulnerability management scanners, and SIEM tools, ensure that organizations realize a return on their security investments.

# Flexible Deployment Options

Deploy On-Premises or in the Cloud. Select from multiple deployment models to best suit your business needs, compliance requirements, and security ecosystem

"[BeyondTrust] does the job for us in enforcing least privilege across our endpoints. The product has great controls and integration into Group Policy."

**IT ARCHITECT,  
RUSSELL INVESTMENTS**

## BUSINESS BENEFITS

- Elevates privileges to applications, maintaining user productivity without compromising security.
- Tracks and controls applications, protecting endpoints from compromise.
- Logs, audits, and reports on user activities, simplifying the process to prove compliance.
- Integrates with other security tools, improving administrator productivity and simplifying use.
- Easy to deploy, with minimal configuration.
- Works seamlessly with the operating system, providing a transparent and intuitive experience to the user.
- Supports a broad range of apps, tasks, and scripts, and provides break-glass options for power users.

BeyondTrust is the worldwide leader in Privileged Access Management (PAM), empowering companies to secure and manage their entire universe of privileges. The BeyondTrust Universal Privilege Management approach secures and protects privileges across passwords, endpoints, and access, giving organizations the visibility and control they need to reduce risk, achieve compliance, and boost operational performance.
