

Product	CadMouse® Pad Compact
Document Type	Product Copy Master Document (PCMD)
Category	Accessory
Language	EN

Part number	3DX-700062
EAN	4260016340972
UPC	821123700581

Product Claim

Perfect balance between precision and comfort

Product description

The best experience for your workplace

With CadMouse Pad we offer you the perfect extension for precision and smooth movements regardless of your workplace setup. With its low friction surface optimized for our sensors and a three layer construction for stability it is developed to provide you always the best experience.

Smooth Operator

While working in CAD applications, your daily mouse movements sum up to kilometres. The high-quality micro-textured coating of the CadMouse Pad offers effortless precision for your engineering tasks. In combination with the PTFE feet of the CadMouse, the CadMouse Pad allows smooth, accurate control of your mouse.

Accurate sensor tracking

Desktop surfaces are not optimized for mouse sensor performance. In addition to its tactile advantages, the low friction surface of the CadMouse Pad enhances its tracking qualities whether you work with the laser sensor of the CadMouse or the optical sensor of the CadMouse Wireless. This ensures accurate sensor imagery for an exact translation of your hand movements into cursor movements.

Stability You Can Rely On

The surface enhances precision while the rigid middle layer ensures stability. The silicone base keeps your CadMouse Pad in place so it won't slip while you are working.

Fits Your Setup

Your workplace is individual - so should be your CadMouse Pad. The CadMouse Pad Compact is ideal for mobile workplaces or setups with limited space.

Main features

- Optimized surface coating
- Micro-textured finish
- Non-slip silicone base
- 2 year warranty

Technical Specification

- Width: 250 mm
- Length: 250 mm
- Approximate Weight: 120 g
