*Finding out what's right **for you***

Secure, simple and flexible

Encrypted USB drives help your organisation stay secure and flexible at the same time, as they come with a lot of options such as customisation, white listing or serial numbers.

Kingston can tailor your Encrypted USB drives in a variety of ways to meet your organisation's needs and policies.

To learn more about customisation options, please visit: kingston.com/datasheets/Secure_ USB_Customization_Program_ en.pdf

Selected features enable you to create unique and indispensable drives. The customisation programme includes the following options:

- › Serial numbering (ideal for white listing)
- › Custom product identification
- › Capacity restrictions (e.g. 1GB)
- › Dual password option (for DTVP3.0 and DT4000G2 only)
- › Custom colour and custom logo

Custom profile options let you create a fully unique product.
Meaning your specific security requirements can be addressed through the custom profile changes listed below (more options are available):

- › Minimum password length
- › Number of password attempts
- › Custom USB drive name

These options are frequently requested by Kingston's customers. With several models, capacities and customisation options to choose from, there's definitely one that's ideal for your organisation's needs and policies.
