FRITZ!Fon

HD telephony and convenient Internet services with DECT

With the cordless FRITZ!Fon telephone you can make calls in superior quality over the Internet and use convenient web services.

An intelligent telephone of the latest generation DECT generation, the FRITZ!Fon combines the convenience of cordless telephony with the quality and performance features of Internet telephony (VoIP) in a single device.

When using Internet calls with FRITZ!Fon feature brilliant, natural sound thanks to HD telephony (High Definition). The FRITZ!Fon reproduces the full frequency spectrum of speech, significantly surpassing the sound quality of fixed-line connections.

With FRITZ!Fon, larger bandwidths can be used for transmission. This provides for not only HD telephony, but also convenient Internet services like e-mail, podcasts, RSS feeds and web radio.

FRITZ!Fon is adaptive: as one of the first intelligent cordless telephones, in the future it will be able to perform firmware updates and add new functions.

The FRITZ!Box models with DECT base station are ideal partners for the FRITZ!Fon. The extensive processor and memory capacity leaves plenty of room for new applications.

Ultimate convenience

FRITZ!Fon features numerous convenience functions, including open listening and hands-free operation in HD quality, and ISDN performance features such as name display for known telephone numbers, hold, alternating calls, call waiting, call diversion or three-way conference function. The full scope and convenience of HD-quality Internet telephony can be used without having to switch on a computer. In addition, the FRITZ!Fon actively informs the user of missed calls, messages on the answering machine and e-mail messages received. Up to 6 FRITZ!Fon handsets or other DECT telephones can be registered on the DECT base station of the FRITZ!Box. Initial installation and individual settings can be conveniently performed using simple wizards.

FRITZ!Box as the ideal partner

The FRITZ!Fon can be used as a mobile handset with any DECT base station. However, when combined with the FRITZ!Box, the full spectrum of possibilities for making telephone calls and surfing over the Internet can be used. The FRITZ!Box combines a never before achieved variety of features in a single device: VDSL and ADSL support, DECT base station for making cordless calls, as well as WLAN N for optimum data transmission. Via the media server, stored films, music and images are also available in the entire network even when the computer is switched off. Furthermore, the online memory can also be used as a local hard drive. This makes the FRITZ!Box the perfect platform for networked applications such as IPTV, video on demand or media streaming.

Support

AVM's service includes comprehensive service portals, regular free updates and e-mail support.

Highly Recommended

The IT press has repeatedly commended FRITZ! products for their user-friendliness and high security standards.
