Designed and manufactured by/for Motorola Mobility LLC, a wholly owned subsidiary of Lenovo.

1. Battery must be substantially depleted; charging rate slows as charging progresses. Charger sold separately in some markets. All battery life claims are approximate and based on the median user tested across a mixed use profile (which includes both usage and standby time) under optimal network conditions. Actual battery performance will vary and depends on many factors including signal strength, network and device settings, temperature, battery condition, and usage patterns.

2. The upgraded version of the MediaTek Helio G95 processor, featuring the new MT6382 chip, makes it possible to support 120Hz refresh rates.

3. Available user storage is less due to preloaded software, operating system and other functions, and is subject to change without notice due to software updates.

4. Water-repellent design creates a barrier to help protect against moderate exposure to water such as accidental spills, splashes or light rain. Not designed to be submerged in water, or exposed to pressurized water, or other liquids; may diminish over time. Not waterproof.

5. Supports up to 1TB microSD card; microSD cards sold separately. Content with DRM restrictions may not be able to be moved to the card.

6. Based on default mode refresh rate setting; battery consumption higher with 120Hz refresh rate. All battery life claims are approximate and based on the median user tested across a mixed use profile (which includes both usage and standby time) under optimal network conditions. Actual battery performance will vary and depends on many factors including signal strength, network and device settings, temperature, battery condition, and usage patterns.
