

FRITZ!DECT Repeater 100

More Range for DECT Cordless Telephones

FRITZ!DECT Repeater 100 provides for more range during calls with cordless DECT telephones, quickly and simply. When used in combination with the FRITZ!Box, the repeater protects all calls from interference through the DECT encryption preconfigured upon delivery.

Up to three calls can be conducted at the same time, and many of the functions and web services familiar from the FRITZ!Box and FRITZ!Fon can be used throughout the entire, expanded range of the home network, including telephone calls in HD, web radio, podcasts and RSS feeds.

FRITZ!DECT Repeater 100 also supports the automatic handover of DECT telephone calls, so that a call in progress can be switched between the base station and the repeater at any time. What is more, the device is equipped with a loop-through socket so that no plug space is lost. Configuration and setup take place automatically in the system. Information about the operating status is displayed on the DECT Monitor of the FRITZ!Box, and updates of the operating software are also performed automatically over this connection.

Highlights at a Glance

- DECT repeater for increased telephone range
- Perfect with FRITZ!Box incl. DECT base station
- Telephone calls bug-proof through encryption ex works
- Up to three simultaneous calls
- Repeater function even for HD telephony, web radio and RSS
