## Slim&Strong Lock

Artikelnummer: 4650755

This ARTICONA security lock helps you to effectively secure your IT devices and protect them from theft. The cable lock is suitable for devices with a Kensington slot and can be easily used and fastened. Thus, for example, notebooks, monitors, docking stations, projectors or scanners can be secured, provided that a suitable security slot is available on the device. The PVC-coated steel cable is robust yet attractive to look at. It is bendable, which allows for optimal placement of the security system. The lock head can rotate flexibly so that the cable can be placed optimally. The slim diameter of the lock makes it particularly suitable for use on modern, thin notebooks and ultrabooks.

### Highlights

- Notebook lock compatible with Kensington Lock mechanism
- Narrow diameter of the lock, therefore especially suitable for thin notebooks and ultrabooks
- Extra strong steel cable (5.0 mm)
- ARTICONA Slim & Strong - recognisable by the black cable
