■ Cooling

A MaxContact heat spreader efficiently transfers heat into a new 3.2-slot heatsink. On top, three Axial-tech fans work in tandem to drive air through the entire array, helping to keep temperature under tight control.

■ Rigid Structure

A new all-aluminum shroud adds a robust flair to TUF builds and is accompanied by a metal backplate, helping reduce PCB flex and keep sensitive components safe.

■ Durability

Dual ball fan bearings that stand up to tough conditions more readily than other bearing types and top-shelf capacitors that pass military-grade certification team up to boost product longevity. These components are soldered to the PCB using an Auto-Extreme automated manufacturing process, ensuring accurate placement and a perfect joint every time.

■ Software

Hardware and software come together to let you fully customize your experience and get the most out of your graphics card. GPU Tweak II allows for hardware tweaking and monitoring, and QuantumCloud utilizes your spare GPU computing power to generate passive income.
