

Unite your enterprise voice

Step smartly into Unified Communications with the MDA220 USB Headset Communications Hub

Uniquely designed to solve the communication challenges of businesses migrating to Unified Communications, the MDA220 USB lets you manage PC voice and multi-media, while maintaining connectivity to your desk phone.

Work the desk phone. Launch the softphone. Even take mobile calls when using a Plantronics Bluetooth® USB headset.

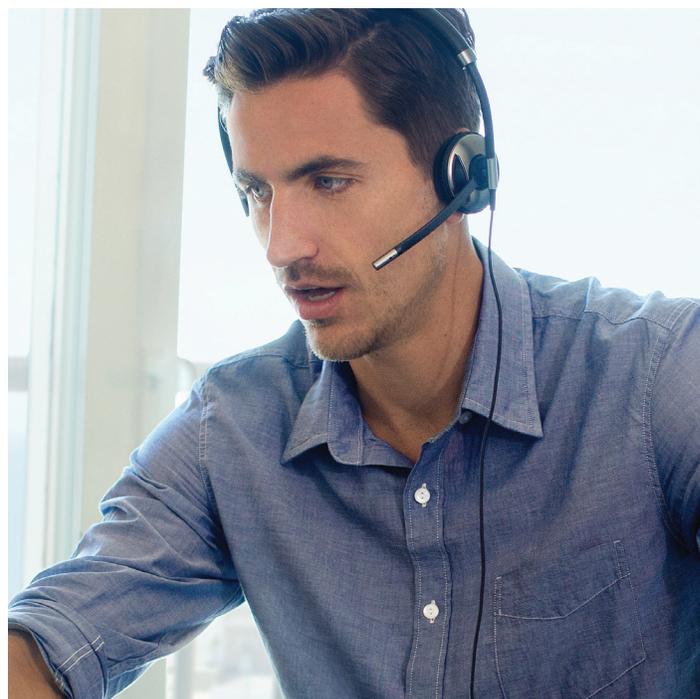

The MDA220 USB is plug-and-play and compatible with all major UC applications, so you can rapidly deploy it for flex-space, hoteling, teleworking, call centers, UC transitioning, and more. It's the simple, seamless solution for an enterprise that just can't sit still.

Switch your Unified Communications strategy to now

Find the Working Solution that fits your users best

As enterprises start making the shift toward Unified Communications, many wish to retain their desk phones and existing desk phone headsets. The MDA220 USB offers a solution that allows business-owners to do just that.

Scenario 1

MDA220 USB + Blackwire corded USB headset

The Blackwire 720 is a corded USB headset that connects directly to PCs to make and take softphone calls. However, with the MDA220, it can easily be plugged into desk phones as well, giving workers the flexibility to make and accept calls from both the PC and the desk phone—without switching headsets.

Scenario 2

MDA220 USB + Voyager 5200 UC

On its own, the Voyager 5200 UC is a wireless solution that connects to both the PC and mobile phone. However, when the Voyager 5200 UC Bluetooth USB adapter is plugged into the MDA220 USB, calls can be made from the PC, the desk phone, and the mobile phone.

Scenario 3

MDA220 USB + DA80 + EncorePro

Enterprises or call centers who already have made a significant investment in corded Plantronics desk phone headsets, like the EncorePro series, can add a DA80 USB adapter to the MDA220 USB and get instant connectivity to both PC and desk phone—without breaking the bank.
