#### CLOUDASHUR<sup>®</sup> The key to your data<sup>™</sup>

INFOSEC AWARDS WINNEF CYBER DEFENSE MAG 2020

# One device. So many possibilities.

CLOUD75HUN®

The unique and patented iStorage cloudAshur hardware security module is the perfect solution for anyone wanting to securely store, share and manage data in the cloud. cloudAshur can also be used to encrypt data stored on a network drive, on a local PC/MAC and to send encrypted email attachments or data via file sharing software applications.

### Encrypt

with the iStorage cloudAshur module

The cloudAshur hardware encryption module encrypts all data in transit and at rest with a FIPS certified randomly generated AES 256-bit encrypted encryption key, which is stored and protected within a dedicated iStorage secure microprocessor (Common Criteria EAL4+ ready). cloudAshur grants the user full and secure control of the encryption key, thus protecting data even if the cloud account is hacked. cloudAshur also encrypts data stored on a local network drive, portable data storage devices as well as PCs/MACs.

## Share

using the iStorage KeyWriter application

## Manage

with the iStorage Remote Management Console

The iStorage patented cloudAshur KeyWriter application enables the required number of cloudAshur modules to be cloned with the same encryption key allowing real-time, ultra-secure collaboration with authorised users regardless of location. The cloudAshur Remote Management Console provides the IT Administrator full visibility and control of all cloudAshur modules deployed within the organisation. Administrator capabilities include temporarily disabling or resetting cloudAshur encryption modules, restricting file types, viewing user log files, displaying user location, as well as restricting the time and location users can access cloudAshur modules.
