Acronis
True Image

The #1 personal backup and cyber protection solution for your customers' entire digital life

All your customers share a common problem: When it comes to losing their precious data and digital memories, it's not a matter of "if," but "when." Protect them from the unexpected. The complete cybersecurity protection they need with an easy-to-use and reliable solution against data loss and cyberattacks. Traditional security tools are not designed for today's cyberthreats. The classic approach of using a patchwork of protection tools — for backup, patch automation, anti-malware, configuration management and more — is complex, expensive and ineffective.

Acronis True Image offers cyber protection — a revolutionary approach integrating fast and flexible backup options with data protection and cybersecurity.

This integrated method eliminates complexity challenges, delivers better protection against today's threats, and maximizes efficiency by saving time and money.

For your customers, this means peace of mind. And you can provide them with the ultimate security solution available today!

Easy-to-use backup and antivirus
Protects everything — photos, files, applications, systems and the devices they're on — through an intuitive interface that's accessible from anywhere.

Efficient all-in-one protection
Unifies reliable, secure backup and advanced anti-malware in one full feature solution, eliminating the cost and complexity of managing multiple tools.

Secure from all cyberthreats
Stops any threat from disrupting your customers' digital life, from disk failure to lost or stolen devices, to the latest cyberattacks — including those never seen before.

One solution covering all your cyber protection needs

Real-time protection

Keep their devices and backup files safe from malicious activities. It blocks even never-seen-before threats in real time by checking every file you interact with.

On-demand antivirus scan

Ensure threats aren't lurking on their computer by scanning for malware whenever you want. Choose a quick file scan or a full system scan to check everything.

Anti-ransomware and cryptojacking protection

Safeguard their files, applications and systems by detecting and stopping ransomware and cryptojacking attacks. It automatically restores any affected files.

File sync and share

Sync files between computers or in the cloud to have duplicate files on multiple devices.

Full image backups

Protect everything to recover anything. A mirror image of their system disk or a selected partition enables customers to easily recover whatever they need — from their entire system to an individual file or folder.

User-friendly cyber protection dashboard

With our intuitive dashboard, monitor everything at a glance, including backup activity, data statistics and cybersecurity metrics for all your customers' devices.

Unlimited mobile devices

Cover all of a family's smartphones and tablets with one license.

Videoconference protection

Protect customer's data and privacy from hacker attacks when videoconferencing via Zoom, Cisco Webex or Microsoft Teams.
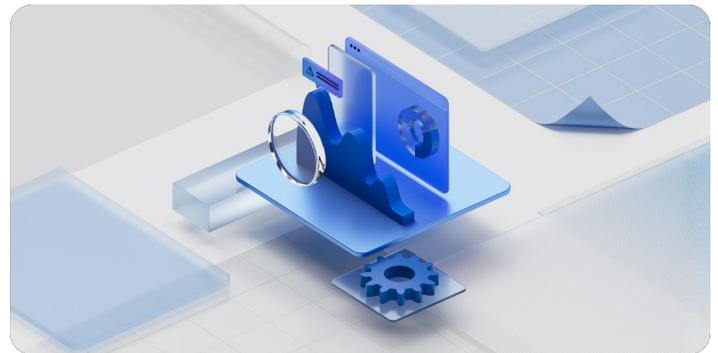

Award-winning cyber protection solution

Over 5.5 million users rely on Acronis True Image every day.

Cybersecurity Excellence Awards Winner	Leader in Online Backup, G2	VB100 Certified	100% Detection Rate, 0 False Alarms in Independent Test	Editors' Choice, PCMag	CHIP.DE Test winner
