

HP EliteBook 6 G2i 14 inch AI PC (Notebook)

HP estimates the product carbon footprint (PCF¹) for its portfolio. This helps identify carbon impacts and implement reduction opportunities. HP's PCFs include emissions from raw material extraction, manufacturing, distribution, use, and end-of-service. Learn more at hp.com/sustainability.

Estimated GHG emissions ²			
	North America	Europe	Asia Pacific
Total PCF	181 kg CO2e	162 kg CO2e	177 kg CO2e
Estimated range kgCO2e	139 - 242	140 - 190	160 - 200
Life Cycle Stage			
Manufacturing	77%	86%	79%
Use	12%	10%	20%
Distribution	10%	4%	< 1%
End of Life	< 1%	< 1%	< 1%

Manufacturing Breakout		Assumptions	
Main board and other boards	37%	Lifetime of product (years)	4
Display	23%	Use energy demand (kWh/yr)	16.2
Solid state drive (SSD)	21%	Memory	1x16GB
Chassis	10%	Storage	256GB
Others ³	3%		
Batteries	3%		
Power supply unit & external cables	2%		
Packaging	<1%		

HP developed its internal LCA methodology, following ISO 14040 & 14044 standards, for estimating GHG emissions using HP-specific data. HP's LCA tools are third-party audited. Materials transformation, manufacturing, and transportation emission factors are sourced from Sphera®. Use phase emissions consider energy efficiency reports, like Energy Star, and emission factors from the International Energy Agency (IEA). These vary by country due to specific energy mixes. Three regional scenarios are presented, which have different energy emissions conversion for the use phase. End-of-life scenarios are modeled based on a representative sample of material disposal and recycling rates from various countries. PCF results depend on tools, data, and assumptions. To enhance transparency, HP reports PCF estimated range. Due to inherent uncertainty, HP advises against comparing PCF estimates from different manufacturers.

Key actions driving progress towards HP's climate goals

	Accelerate sustainability services Extend product life through Repair, IT Asset Disposition, Refurbishment, Managed Services and HP certified refurbished Hardware.		Decarbonize our supply chain Drive and support supplier carbon reduction, renewable electricity, surface transportation, alternative fuels, and electric vehicles for product shipments.
	Transition to sustainable materials Increase use of renewable materials, recycled plastic and recycled metals.		Design for energy efficiency Design in existing and new energy-efficient product technologies.

1. A product carbon footprint is defined as the total amount of greenhouse gases (GHG) emitted directly and indirectly by a product over its lifetime. Greenhouse gas emissions are reported as global warming potential for 100-year time horizon (GWP-100) in units of CO₂ equivalence.
2. The information provided here represents the lifecycle carbon footprint of the most common configuration for this product. Specifications used in this assessment are listed in the assumptions table. HP reports the estimated mean PCF value along with confidence intervals. Individual values may not sum to total due to rounding.
3. Others include assembly energy, other subassemblies, and all subassemblies packaging and transport.
