Data Integration

dataglobal APIs integrate and connect your information

With our smart interfaces and APIs, you integrate data from any application and business process into the content services and the digital workplace.

dataglobal offers you automated and manual integration of relevant information from your corporate-wide applications. Information within the collective business context can be easily linked, for example from your CRM system to your ERP data.

Centralized digital workplace

The dataglobal interfaces easily bring together data from a wide range of applications into one centralized digital workplace. This allows all applications to use dataglobal content services.

### Seamless integration of data and documents

- from applications such as SAP, email, SharePoint
- from the Cloud
- directly from the employee, e.g. from MS Office applications

For all other company resources, such as from individual applications, ERP systems or banking systems etc., dataglobal provides easy-to-use APIs to integrate this valuable information.

Efficient searches thanks to intelligent data classification

The dataglobal interfaces and APIs provide the complete index for corporate-wide search and access to information through external systems. Likewise, content-related and self-learning data classification can be used via the APIs.

It doesn't get any more flexible than that!
